SHI Product Assessment 2024

Since 2008, Sentinel Holding Institut GmbH (SHI) has been establishing a unique standard for products that support healthy indoor air. Experts carry out independent product assessments based on clear and transparent criteria. In addition, the independent testing company SGS regularly audits the processes and data accuracy.

Criteria	Product category	Harmful substance limit	Assessment
SHI Product Assessment	Sealants and adhesives	TVOC $\leq 300 \mu\text{g}/\text{m}^3$ Formaldehyd $\leq 24 \mu\text{g}/\text{m}^3$	Indoor Air Quality Certified
Valid untill: 06 July 2027

QNG - Qualitätssiegel Nachhaltiges Gebäude

The Qualitätssiegel Nachhaltiges Gebäude (Quality Seal for Sustainable Buildings), developed by the German Federal Ministry for Housing, Urban Development and Building (BMWSB), defines requirements for the ecological, socio-cultural, and economic quality of buildings. The Sentinel Holding Institut evaluates construction products in accordance with QNG requirements for certification and awards the QNG ready label. Compliance with the QNG standard is a prerequisite for eligibility for the KfW funding programme. For certain product groups, the QNG currently has no specific requirements defined. Although classified as not assessment-relevant, these products remain suitable for QNG-certified projects.

Criteria	Pos. / product group	Considered substances	QNG assessment
3.1.3 Schadstoffvermeidung in Baumaterialien	4.2 On-site applied adhesives and sealants based on PU	VOC / Emissions / hazardous substances / chlorinated paraffins / polybrominated biphenyls (PBB) / polybrominated diphenyl ethers (PBDE) / SVHC	QNG ready
Verification: Sicherheitsdatenblatt 25.09.2024, Nachhaltigkeitsdatenblatt 22.02.2024

DGNB New Construction 2023

The DGNB System (German Sustainable Building Council) assesses the sustainability of various types of buildings. It can be applied to both large-scale private and commercial projects as well as smaller residential buildings. The 2023 version sets high standards for ecological, economic, socio-cultural, and functional aspects throughout the entire life cycle of a building.

Criteria	No. / Relevant building components / construction materials / surfaces	Considered substances / aspects	Quality level
ENV 1.2 Local environmental impact, 03.05.2024 (3rd edition)	11 Indoor bonding and waterproofing.	VVOCs, VOCs, SVOC emissions and content of hazardous substances	Quality level 4

Verification: Sicherheitsdatenblatt 25.09.2024, EC1 Plus Zertifikat (8191/10.10.13) 07.07.2022

Criteria	No. / Relevant building components / construction materials / surfaces	Considered substances / aspects	Quality level
ENV 1.2 Local environmental impact, 29.05.2025 (4th edition)	11 Indoor bonding and waterproofing	VVOCs, VOCs, SVOC emissions and content of hazardous substances	Quality level 4

Verification: Sicherheitsdatenblatt 25.09.2024, EC1 Plus Zertifikat (8191/10.10.13) 07.07.2022

DGNB New Construction 2018

The DGNB System (German Sustainable Building Council) assesses the sustainability of various types of buildings. It can be applied to both large-scale private and commercial projects as well as smaller residential buildings.

Criteria	No. / Relevant building components / construction materials / surfaces	Considered substances / aspects	Quality level
ENV 1.2 Local environmental impact	12 Adhesive bonds on small joints under mechanical stress	Chlorinated paraffins, solvents, HC	Quality level 4
Verification: Nachhaltigkeitsdatenblatt 22.02.2024			

Product:

OTTOCOLL® KLARKARL

SHI Product Passport no.:

1093-10-1023

BNB-BN Neubau V2015

The Bewertungssystem Nachhaltiges Bauen (Assessment System for Sustainable Building) is a tool for evaluating public office and administrative buildings, educational facilities, laboratory buildings, and outdoor areas in Germany. The BNB was developed by the former Federal Ministry for the Environment, Nature Conservation, Building and Nuclear Safety (BMUB) and is now overseen by the Federal Ministry for Housing, Urban Development and Building (BMWSB).

Criteria	Pos. / product type	Considered substance group	Quality level
1.1.6 Risiken für die lokale Umwelt	8 Adhesives and sealants made of PU, SMP (silan-modified polymers), acrylic (including dispersion adhesives), or silicone	VOC / hazardous substances / biocides	Quality level 5
Verification: Sicherheitsdatenblatt 25.09.2024, EC1 Plus Zertifikat (8191/10.10.13) 07.07.2022, Nachhaltigkeitsdatenblatt 22.02.2024			

Product:

OTTOCOLL® KLARKARL

SHI Product Passport no.:

1093-10-1023

EU taxonomy

The EU Taxonomy classifies economic activities and products according to their environmental impact. At the product level, the EU regulation defines clear requirements for harmful substances, formaldehyde and volatile organic compounds (VOCs). The Sentinel Holding Institut GmbH labels qualified products that meet this standard.

Criteria	Product type	Considered substances	Assessment
DNSH - Pollution prevention and control		Substances according to Annex C	EU taxonomy compliant
Verification: Sicherheitsdatenblatt vom 25.09.2024 (Druckdatum)			

Product:

OTTOCOLL® KLARKARL

SHI Product Passport no.:

1093-10-1023

BREEAM DE Neubau 2018

BREEAM (Building Research Establishment Environmental Assessment Methodology) is a UK-based building assessment system that evaluates the sustainability of new constructions, refurbishments, and conversions. Developed by the Building Research Establishment (BRE), the system aims to assess and improve the environmental, economic, and social performance of buildings.

Criteria	Product category	Considered substances	Quality level
Hea 02 Indoor Air Quality	Interior adhesives and sealants (including flooring adhesives)	Emissions: Formaldehyde, TVOC, TSVOC, carcinogens	Exemplary quality
Verification: EMICODE EC1+-Zertifikat vom 07.07.2022			

Product:

OTTOCOLL® KLARKARL

SHI Product Passport no.:

1093-10-1023

Product labels

In the construction industry, high-quality materials are crucial for a building's indoor air quality and sustainability. Product labels and certificates offer guidance to meet these requirements. However, the evaluation criteria of these labels vary, and it is important to carefully assess them to ensure products align with the specific needs of a construction project.

The EMICODE® label, awarded by the German manufacturers' association "GEV – Gemeinschaft Emissionskontrollierte Verlegewerkstoffe, Klebstoffe und Bauprodukte e. V.", is primarily relevant for flooring installation materials. The EMICODE® EC1^{PLUS} label, as the premium class, sets significantly stricter emission limits than the other label variants.

Products bearing the Sentinel Holding Institute QNG-ready seal are suitable for projects aiming to achieve the "Qualitätssiegel Nachhaltiges Gebäude" (Quality Seal for Sustainable Buildings). QNG-ready products meet the requirements of QNG Appendix Document 3.1.3, "Avoidance of Harmful Substances in Building Materials." The KfW loan program Climate-Friendly New Construction with QNG may allow for additional funding.

This product is SHI Indoor Air Quality certified and recommended by Sentinel Holding Institut. Indoor-air-focused construction, renovation, and operation of buildings is made possible by transparent and verifiable criteria thanks to the Sentinel Holding concept.

Product:

OTTOCOLL® KLARKARL

SHI Product Passport no.:

1093-10-1023

Legal notices

(*) These criteria apply to the construction project as a whole. While individual products can positively contribute to the overall building score through proper planning, the evaluation is always conducted at the building level. The information was provided entirely by the manufacturer.

Find our criteria here: <https://www.sentinel-holding.eu/de/Themenwelten/Pr%C3%BCfverfahren/Pr%C3%BCfverfahren%20f%C3%BCr%20Produkte>

1K-Hybrid-Polymer STP-Klebstoff

Für Innen und Außen

M 502

Eigenschaften

- › Glasklare Klebungen - Klebung nahezu unsichtbar
- › Haftet auch auf feuchten Untergründen
- › Elastisch - Gleicht Bewegungen aus
- › Geruchsarm - Keine Geruchsbelästigung
- › Silikonfrei
- › Isocyanatfrei

Anwendungsgebiete

Geeignet für:

- › Holz & Holzwerkstoffe
- › Metall & Metallbeschichtungen
- › Beschichtete Gläser & Spiegel
- › Kunststoffe (außer PE, PP)
- › Beton & zementäre Werkstoffe
- › Fliesen / Keramik
- › Ziegel / Klinker
- › Naturstein
- › Gipsfaser- & Gipskartonplatten
- › Glas (ohne UV-Belastung)

Normen und Prüfungen

- › Entspricht den Anforderungen des Brandverhaltens nach EN 13501: Klasse E
- › EMICODE® EC 1 Plus - sehr emissionsarm
- › Sentinel Holding Institut - Zertifiziert und ausgezeichnet mit dem SHI-Produktpass - Einstufung für DGNB, QNG, BNB, BREEAM und EU-Taxonomie
- › Französische VOC-Emissionsklasse A+

Technische Daten

Hautbildungszeit bei 23 °C/50 % rLf [min]	~ 40
Aushärtung in 24 Std. bei 23 °C/50 % rLf [mm]	~ 3
Verarbeitungstemperatur von/bis [°C]	+ 5 / 40
Viskosität bei 23 °C	pastös, standfest
Dichte bei 23 °C nach ISO 1183-1 [g/cm³]	~ 1,0
Shore-A-Härte nach ISO 868	~ 30
Dehnungswert bei 100 % nach ISO 37, Typ 3 [N/mm²]	~ 0,6
Reißdehnung nach ISO 37, Typ 3 [%]	~ 470
Zugfestigkeit nach ISO 37, Typ 3 [N/mm²]	~ 2,1
Temperaturbeständigkeit von/bis [°C]	- 40 / + 90

DICHTEN & KLEBEN

Lagerstabilität bei 23 °C/50 % rLf [Monate] 12 ¹

1) ab Herstellung

Diese Werte sind nicht zur Erstellung von Spezifikationen bestimmt. Bitte wenden Sie sich vor der Erstellung von Spezifikationen an OTTO-CHEMIE.

Vorbehandlung

Die Haftflächen müssen gereinigt und jegliche Verunreinigungen, wie Trennmittel, Konservierungsmittel, Fett, Öl, Staub, Wasser, alte Kleb-/Dichtstoffe sowie andere die Haftung beeinträchtigende Stoffe entfernt werden. Reinigen von nicht-porösen Untergründen: Reinigung mit OTTO Cleaner T (keine Ablüftezeit erforderlich) und sauberem, flusenfreiem Tuch. Reinigen von porösen Untergründen: Oberflächen mechanisch, z.B. mit einer Stahlbürste oder einer Schleifscheibe, von losen Partikeln säubern.

Die Haftflächen müssen sauber, staub- und fettfrei sowie tragfähig sein.

Grundierungstabelle

Die Anforderungen an elastische Abdichtungen und Klebungen sind abhängig von den jeweiligen äußeren Einflüssen. Extreme Temperaturschwankungen, Dehn- und Scherkräfte, wiederholter Kontakt mit Wasser etc. stellen hohe Ansprüche an die Haftverbindung. Daher ist die Verwendung der genannten Primer erforderlich.

Acrylglas/PMMA	+ / 1217 / OTTOSEAL® S 72
Aluminium blank	+ / 1216
Aluminium eloxiert	+ / 1216

1) Nicht für die Abdichtung von Abdeckblechen aus Kupfer geeignet

+ = ohne Grundierung gute Haftung

- = nicht geeignet

T = Test/Vorversuch empfohlen

Besondere Hinweise

Vor dem Einsatz des Produktes hat der Anwender sicherzustellen, dass die Werkstoffe/Materialien in dem Kontaktbereich mit diesem und miteinander verträglich sind und sich nicht schädigen oder verändern (z. B. verfärben). Bei Werkstoffen/Materialien, die in der Folge im Bereich des Produktes verarbeitet werden, hat der Anwender im Vorfeld abzuklären, dass deren Inhaltsstoffe bzw. Ausdünstungen zu keiner Beeinträchtigung oder Veränderung (z. B. Verfärbung) des Produktes führen können.

Gegebenenfalls hat der Anwender Rücksprache mit dem jeweiligen Hersteller der Werkstoffe/Materialien zu nehmen.

Farben, Lacke, Kunststoffe und andere Beschichtungsmaterialien müssen mit dem Kleb-/Dichtstoff verträglich sein.

Bei UV- belasteten Klebungen/ Abdichtungen von Glas empfehlen wir die Verwendung unserer hochwertigen Silikon-Kleb-/ Dichtstoffe wie OTTOSEAL® S 110 / S 120 (für Glasfalzabdichtungen), OTTOSEAL® S 10 (u.a. für Klebungen), OTTOSEAL® S 7 (für Wetterversiegelungen) oder OTTOCOLL® S 81 (für geklebtes Fenster).

Bei UV-belasteten Klebungen/ Abdichtungen von transparenten Kunststoffen wie z. B. Acrylglas empfehlen wir unseren Silikon-Dichtstoff OTTOSEAL® S 72.

Eine Veränderung der Eigenschaften (z.B. Farbe, Mechanik) durch äußere Einflüsse (v.a. bei lichtdurchlässigen Substraten oder breiten Klebstoffugen) durch z.B. UV-Strahlung und höhere Temperaturen kann nicht ausgeschlossen werden. Die Klebfuge ist

entsprechend auszuführen.

Permanente UV- und Dauerfeuchtigkeitsbelastung muss ausgeschlossen werden, ansonsten kann der Klebstoff vergilben und verspröden.

Bei Kontakt mit Buntmetallen kann eine Verfärbung des Klebstoffes (insbesondere bei flächigen Klebungen) nicht ausgeschlossen werden.

Nicht für die Abdichtung/Klebung von Kupfer unter UV-/Temperatureinwirkung geeignet.

Anwendungshinweise

Um optimale Haftung und gute mechanische Eigenschaften zu erzielen, muss der Einschluß von Luft in der Klebfuge vermieden werden.

Die Zeit bis zur Aushärtung kann durch Feuchtigkeitszufuhr und höhere Temperaturen verkürzt werden.

Bei der flächigen Klebung von dampfdichten Substraten sollte der Klebstoff befeuchtet werden.

Unser Produkt kann überstrichen / überlackiert werden. Die Verträglichkeit zwischen Beschichtung und unserem Produkt muss **vor** der Anwendung durch den Anwender/Verarbeiter überprüft werden - ggf. unter Produktionsbedingungen. Unsere OTTO Anwendungstechnik unterstützt Sie gerne unverbindlich. Wird nach erfolgreicher Verträglichkeitsprüfung unser Produkt in Ausnahmefällen ganzflächig überstrichen, muss auch diese Beschichtung der elastischen Bewegung des Dichtstoffes folgen können. Anderenfalls können Rissbildungen im Anstrich oder optische Beeinträchtigungen entstehen.

Farben, Lacke, Kunststoffe und andere Beschichtungsmaterialien müssen mit dem Kleb-/Dichtstoff verträglich sein. Materialien mit alkalischen Inhaltsstoffen können Wechselwirkungen in Form von Verfärbungen verursachen.

Reinmineralische Anstriche (z.B. auf Basis Kaliwasserglas oder Kalk) sind aufgrund der Sprödigkeit des Anstrichs zum ganzflächigen Überstreichen nicht geeignet.

Eine Überarbeitung mit Beschichtungsstoffen kann je nach klimatischen Bedingungen und Anstrichart ab etwa 1 Stunde erfolgen.

In Kontakt mit oxidativ härtenden Anstrichen (z.B. Alkydharz-Lacke) können Trocknung und Aushärtung verzögert oder verhindert werden.

Wir empfehlen Vorversuche.

Beschichtungen sowie deren Ausdünstungen können zu Verfärbungen des Kleb-/ Dichtstoffes führen.

Verfärbungen von Beschichtungen durch Wechselwirkungen mit dem Kleb-/ Dichtstoff sind nicht ausgeschlossen.

Wegen der Vielzahl möglicher Einflüsse bei der Verarbeitung und der Anwendung ist vom Verarbeiter stets eine Probeverarbeitung und -anwendung vorzunehmen.

Das konkrete Aufbrauchdatum ist dem Gebindeaufdruck zu entnehmen und zu beachten.

Wir empfehlen, unsere Produkte in den ungeöffneten Originalgebinden trocken (< 60 % rLF) im Temperaturbereich von + 15° C bis + 25° C zu lagern. Werden die Produkte über längere Zeiträume (mehrere Wochen) bei höherer Temperatur/ Luftfeuchtigkeit gelagert und / oder transportiert, kann eine Verringerung der Haltbarkeit bzw. eine Veränderung der Materialeigenschaften nicht ausgeschlossen werden.

Die nachfolgend beschriebenen Hinweise gelten sowohl für die Klebung von Glasspiegeln als auch für die Klebung von lackiertem Glas.

Verarbeitung als Spiegel-Klebstoff:

Es dürfen nur Spiegel geklebt werden, deren Reflexions- und Schutzschicht der DIN EN 1036 entsprechen. Im Zweifelsfall bitte unbedingt dazu Informationen des Spiegelherstellers einholen.

Mit dem Spiegel Saint Gobain MIRALITE ® PURE kann unter bestimmten Objektbedingungen eine Unverträglichkeit nicht ausgeschlossen werden.

Für die Klebung des Saint Gobain MIRALITE ® PURE empfehlen wir unsere Silikon-Spiegel-Klebstoffe OTTOCOLL® S 16 bzw. OTTOCOLL® S 610.

Bei der Auswahl des lackierten Glases gilt es im Vorfeld die ortsübliche Belichtung, sowie die Schichtstärke und Lichtdurchlässigkeit des Lacks zu berücksichtigen. Bei manchen nicht deckenden Beschichtungen ist es möglich, dass sogar transparente Klebstoffe auf der Vorderseite erkennbar sind.

Mineralische Untergründe, wie z. B. Beton, Putz, Mauerwerk, Gipskarton, Porenbeton sowie unbehandeltes Holz müssen unbedingt mit OTTO Primer 1105 grundiert werden. Die Verwendung dieses Primers dient dabei nicht nur der Haftverbesserung, sondern auch der unbedingt notwendigen Absperrung der Alkalität. Nicht abgesperrte Alkalität kann in Kombination mit Feuchtigkeit u. U. zur Beschädigung der Spiegelrückseite führen.

Den Klebstoff bei der Klebung niemals punktförmig, sondern in senkrechten Streifen auftragen. Die Länge eines Klebestreifens soll 200 mm nicht übersteigen. Je m² Glas / Spiegel sind mindestens 3 Klebestreifen so aufzutragen, dass nach Anpressen des Glases / Spiegels die Streifenbreite 10 mm nicht überschreitet und der Abstand zwischen den Klebestreifen mindestens 200 mm beträgt, damit die für die Vulkanisation erforderliche Luftzirkulation möglich ist. Für eine optimale Tragfähigkeit ist eine Haftfläche von mindestens 100 cm²/kg Glas / Spiegel erforderlich.

Zur Vermeidung der Einsperrung des Vernetzer-Spaltprodukts ist ein Mindestabstand zwischen Glas / Spiegel und Untergrund von 1,6 mm zwingend einzuhalten. Dieser lässt sich auf zweckmäßigste Weise durch das Aufkleben von Abstandshaltern erreichen. Der hier vorgeschriebene Mindestabstand dient dem Abtransport des Vernetzer-Spaltprodukts.

Damit werden die vom Institut des Glaserhandwerks in Hadamar geforderten Mindesthinterlüftungsabstände für Spiegel in keinem Fall aufgehoben.

Die empfohlene Klebschichtstärke beträgt 2 - 4 mm.

Die für die Klebung erforderlichen Festigkeitswerte werden frühestens nach 48 Stunden erreicht (23°C, ca. 50% rLf). Bis dahin ist eine Vorfixierung notwendig. Diese kann mit wieder entfernbaren, mechanischen Hilfen, wie z. B. Klötzen, Keilen oder einseitig wirkenden Klebebändern von vorne (Glasseite) oder mit doppelseitigen Klebebändern, z. B. OTTOTAPE Fixierband (aufgedoppelt verlegt), von hinten (Rückseite) erfolgen.

Zur äußeren Versiegelung des Glases / Spiegels in Verbindung mit Natursteinen empfehlen wir OTTOSEAL® S 70 und

OTTOSEAL® S 80, in Verbindung mit anderen Materialien wie Keramik, Metall, Glas etc. empfehlen wir OTTOSEAL® S 120 und OTTOSEAL® S 125.

Zu beachten ist, dass die Versiegelung erst nach vollständiger Aushärtung des Klebstoffes und dem Entweichen der Spaltprodukte erfolgen darf. Diese Zeit beträgt etwa 7 Tage. Bei beschichteten Gläsern / Spiegeln ohne Glasrücken sollten nur die vertikalen Glasränder versiegelt werden, um eine Beschädigung der Glas- / Spiegelbeschichtung durch Kondenswasserbildung zu vermeiden. Bitte beachten Sie die nachfolgende Zeichnung.

Bei der Klebung an Decken und bei der Klebung an Wände (wenn die Oberkante des Glases 4 m über der Bodenfläche liegt), muss das Glas / der Spiegel zusätzlich mechanisch z. B. durch Schrauben bzw. Einlegen in Rahmen gesichert werden.

Mängelhaftung

Die vorstehenden Informationen und unsere anwendungstechnische Beratung in Wort, Schrift und durch Versuche erfolgen nach bestem Wissen, gelten jedoch nur als unverbindliche Hinweise, auch in Bezug auf etwaige Schutzrechte Dritter. Die Angaben in dieser Druckschrift befreien den Verarbeiter nicht von einer eigenen Prüfung unserer Produkte im Hinblick auf ihre Eignung für die beabsichtigten Verfahren und Zwecke. Anwendung, Verwendung und Verarbeitung unserer Produkte und der auf Grund unserer anwendungstechnischen Beratung hergestellten Produkte erfolgen außerhalb unserer Kontrollmöglichkeiten und liegen daher ausschließlich in der Verantwortung des Verarbeiters. Unterliegt die Anwendung, für die unsere Produkte herangezogen werden, einer behördlichen Genehmigungspflicht, so ist der Anwender für die Erlangung dieser Genehmigungen verantwortlich. Wir behalten uns das Recht zur Anpassung des Produktes an den technischen Fortschritt und an neue Entwicklungen vor. Im Übrigen verweisen wir auf unsere Allgemeinen Geschäftsbedingungen, insbesondere auch bezüglich einer etwaigen Mängelhaftung. Sie finden unsere AGB unter www.otto-chemie.de.

Sicherheitsdatenblatt

gemäß Verordnung (EG) Nr. 1907/2006, Artikel 31

Druckdatum: 25.09.2024

Version: 6 (ersetzt Version 5)

überarbeitet am: 25.09.2024

ABSCHNITT 1: Bezeichnung des Stoffs beziehungsweise des Gemischs und des Unternehmens

- **1.1 Produktidentifikator**
- **Handelsname:** OTTOCOLL KLARKARL
- **Verwendung des Stoffes / des Gemisches** Klebstoff
- **1.3 Einzelheiten zum Lieferanten, der das Sicherheitsdatenblatt bereitstellt**
- **Hersteller/Lieferant:**
Hermann Otto GmbH
Krankenhausstraße 14
D-83413 Fridolfing
Tel.: 0049/(0)8684/908-0
Fax.: 0049/(0)8684/908-1840
- **Auskunftgebender Bereich:**
Tel.: 0049- (0)8684- 908- 2363 (-4300)
E-Mail: alois.parzinger@otto-chemie.de
- **1.4 Notrufnummer:**
Giftnotruf München Tel.: 0049- (0)89- 192 40 (24 h von Mo.-So.)
für Österreich: 0043-1-40 6-43 43 (Vergiftungsinformationszentrale der Gesundheit Österreich GmbH- 24h täglich)

ABSCHNITT 2: Mögliche Gefahren

- **2.1 Einstufung des Stoffs oder Gemischs**
- **Einstufung gemäß Verordnung (EG) Nr. 1272/2008**
Das Produkt ist gemäß CLP-Verordnung nicht eingestuft.
- **2.2 Kennzeichnungselemente**
- **Kennzeichnung gemäß Verordnung (EG) Nr. 1272/2008 entfällt**
- **Gefahrenpiktogramme entfällt**
- **Signalwort entfällt**
- **Gefahrenhinweise entfällt**
- **Zusätzliche Angaben:**
EUH208 Enthält Trimethoxyvinylsilan. Kann allergische Reaktionen hervorrufen.
EUH210 Sicherheitsdatenblatt auf Anfrage erhältlich.
- **2.3 Sonstige Gefahren**
Während der Verarbeitung und Aushärtung des Materials werden chemische Stoffe in die Luft freigesetzt (siehe Punkt 11). Deshalb für gute Raumbelüftung und bei Bedarf für Absaugung sorgen.
- **Ergebnisse der PBT- und vPvB-Beurteilung**
- **PBT:** Nicht anwendbar.
- **vPvB:** Nicht anwendbar.
- **Feststellung endokrinschädlicher Eigenschaften**
Dieses Produkt enthält keine Bestandteile, die gemäß REACH Artikel 57(f) oder der delegierten Verordnung (EU) 2017/2100 der Kommission oder der delegierten Verordnung (EU) 2018/605 der Kommission in Mengen von 0,1 % oder mehr endokrinschädliche Eigenschaften aufweisen.

ABSCHNITT 3: Zusammensetzung/Angaben zu Bestandteilen

- **3.2 Gemische**
- **Beschreibung:** Klebstoff auf Basis Hybrid-Polymer STP
- **Gefährliche Inhaltsstoffe:**

CAS: 2768-02-7	Trimethoxyvinylsilan	<2,5%
EINECS: 220-449-8	⚠ Flam. Liq. 3, H226; ⚠ Acute Tox. 4, H332; Skin Sens.	
Reg.nr.: 01-2119513215-52-xxxx 1B, H317		
- **zusätzl. Hinweise:**
Der Wortlaut der angeführten Gefahrenhinweise ist dem Abschnitt 16 zu entnehmen.

Sicherheitsdatenblatt

Druckdatum: 25.09.2024

Version: 6 (ersetzt Version 5)

überarbeitet am: 25.09.2024

Handelsname: OTTOCOLL KLARKARL

(Fortsetzung von Seite 1)

ABSCHNITT 4: Erste-Hilfe-Maßnahmen

· 4.1 Beschreibung der Erste-Hilfe-Maßnahmen

· nach Einatmen:

Frischluftezufuhr, gegebenenfalls Atemspende, Wärme. Bei anhaltenden Beschwerden Arzt konsultieren.

· nach Hautkontakt:

Sofort mit Wasser und Seife abwaschen und gut nachspülen.

Bei andauernder Hautreizung Arzt aufsuchen.

· nach Augenkontakt:

Augen bei geöffnetem Lidspalt mehrere Minuten unter fließendem Wasser abspülen und Arzt konsultieren. Auf Kontaktlinsen prüfen und falls vorhanden entfernen.

· nach Verschlucken:

Kein Erbrechen herbeiführen. Sofort Arzthilfe zuziehen. Verpackung oder Etikett vorzeigen.

ABSCHNITT 5: Maßnahmen zur Brandbekämpfung

· 5.1 Löschmittel

· Geeignete Löschmittel:

CO₂, Löschpulver oder Wassersprühstrahl. Größeren Brand mit Wassersprühstrahl oder alkoholbeständigem Schaum bekämpfen.

· 5.2 Besondere vom Stoff oder Gemisch ausgehende Gefahren

Beim Erhitzen oder im Brandfalle Bildung giftiger Gase möglich.

· 5.3 Hinweise für die Brandbekämpfung

· Besondere Schutzausrüstung:

Explosions- und Brandgase nicht einatmen.

Atemschutzgerät anlegen.

ABSCHNITT 6: Maßnahmen bei unbeabsichtigter Freisetzung

· 6.1 Personenbezogene Vorsichtsmaßnahmen, Schutzausrüstungen und in Notfällen anzuwendende Verfahren

Für ausreichende Lüftung sorgen.

· 6.2 Umweltschutzmaßnahmen:

Nicht in die Kanalisation/Oberflächenwasser/Grundwasser gelangen lassen.

· 6.3 Methoden und Material für Rückhaltung und Reinigung:

Kontaminiertes Material als Abfall nach Abschnitt 13 entsorgen.

Mechanisch aufnehmen.

· 6.4 Verweis auf andere Abschnitte

Informationen zur persönlichen Schutzausrüstung siehe Abschnitt 8.

ABSCHNITT 7: Handhabung und Lagerung

· 7.1 Schutzmaßnahmen zur sicheren Handhabung

Für gute Belüftung/Absaugung am Arbeitsplatz sorgen.

Siehe Punkt 8: Persönliche Schutzausrüstung.

· 7.2 Bedingungen zur sicheren Lagerung unter Berücksichtigung von Unverträglichkeiten

· Lagerung:

Anforderung an Lagerräume und Behälter: Eindringen in den Boden sicher verhindern.

Zusammenlagerungshinweise: Getrennt von Lebensmitteln lagern.

· Weitere Angaben zu den Lagerbedingungen:

In gut verschlossenen Gebinden kühl und trocken lagern.

Vor Hitze und direkter Sonnenbestrahlung schützen.

· Lagerklasse LGK gemäß TRGS 510: 12

(Fortsetzung auf Seite 3)

Sicherheitsdatenblatt

gemäß Verordnung (EG) Nr. 1907/2006, Artikel 31

Druckdatum: 25.09.2024

Version: 6 (ersetzt Version 5)

Handelsname: OTTOCOLL KLARKARL

(Fortsetzung von Seite 2)

· **GISCode** RS10 Verlegewerkstoffe, methoxysilanhaltig, kennzeichnungsfrei (keine Grundierungen)

ABSCHNITT 8: Begrenzung und Überwachung der Exposition/Persönliche Schutzausrüstungen

· 8.1 Zu überwachende Parameter

· **Bestandteile mit arbeitsplatzbezogenen, zu überwachenden Grenzwerten:**· **CAS-Nr. Bezeichnung des Stoffes % Art Wert Einheit**· **Zusätzliche Expositionsgrenzwerte bei möglichen Verarbeitungsgefahren:**

67-56-1 Methanol

AGW Langzeitwert: 130 mg/m³, 100 ml/m³

2(II);DFG, EU, H, Y

· **Zusätzliche Hinweise:** Als Grundlage dienen die bei der Erstellung gültigen Listen.

· 8.2 Begrenzung und Überwachung der Exposition

· **Geeignete technische Steuerungseinrichtungen** Keine weiteren Angaben, siehe Abschnitt 7.· **Individuelle Schutzmaßnahmen, zum Beispiel persönliche Schutzausrüstung**· **Allgemeine Schutz- und Hygienemaßnahmen:**

Die üblichen Vorsichtsmaßnahmen beim Umgang mit Chemikalien sind zu beachten.

Vor den Pausen und bei Arbeitsende Hände waschen.

Berührung mit den Augen und der Haut vermeiden.

· **Atemschutz**

Das Produkt nicht bei ungenügender Lüftung verwenden oder Schutzmaske mit entsprechendem Gasfilter (Typ ABEK nach EN 14387) tragen.

· **Handschutz** Schutzhandschuhe.

· **Handschuhmaterial**

Die Auswahl eines geeigneten Handschuhs ist nicht nur vom Material, sondern auch von weiteren Qualitätsmerkmalen abhängig und von Hersteller zu Hersteller unterschiedlich. Da das Produkt eine Zubereitung aus mehreren Stoffen darstellt, ist die Beständigkeit von Handschuhmaterialien nicht vorausberechenbar und muß deshalb vor dem Einsatz überprüft werden.

z.B. Naturkautschuk Latex (Kurzzeitanwendung)

Die Schutzhandschuhe sollten in jedem Fall auf ihre Arbeitsplatz- spezifische Eignung (z.B.

Feinfühligkeit, mechanische Beständigkeit, Produktverträglichkeit, Permeationszeit)geprüft werden.

Anweisungen und Informationen der Handschuhhersteller zur Anwendung, Lagerung, Pflege und zum Austausch der Handschuhe befolgen. Die Schutzhandschuhe sollten bei Beschädigung oder ersten Abnutzungserscheinungen sofort ersetzt werden. Die Auswahl eines geeigneten

Handschuhs ist nicht nur vom Material, sondern auch von weiteren Qualitätsmerkmalen abhängig und von Hersteller zu Hersteller unterschiedlich. Bezugsnummer EN 374.

Empfohlenes Handschuhmaterial: z.B. Nitrilkautschuk

Empfohlene Materialstärke: > 0,4 mm

· **Durchdringungszeit des Handschuhmaterials** Durchbruchzeit: 10 - 30 min· **Augen-/Gesichtsschutz** Schutzbrille.· **Körperschutz:** Arbeitsschutzkleidung.

ABSCHNITT 9: Physikalische und chemische Eigenschaften

· 9.1 Angaben zu den grundlegenden physikalischen und chemischen Eigenschaften

· **Allgemeine Angaben**· **Aggregatzustand**

ABSCHNITT 10: Stabilität und Reaktivität

- **10.1 Reaktivität** Keine weiteren relevanten Informationen verfügbar.
- **10.2 Chemische Stabilität**
- **Thermische Zersetzung / zu vermeidende Bedingungen:**
Keine Zersetzung bei bestimmungsgemäßer Verwendung.
Starke Erhitzung vermeiden.
- **10.3 Möglichkeit gefährlicher Reaktionen**
Durch Kontakt mit Luftfeuchtigkeit, Wasser und protische Mittel entsteht Methanol.
- **10.6 Gefährliche Zersetzungsprodukte:** siehe Punkt 5.2

ABSCHNITT 11: Toxikologische Angaben

- **11.1 Angaben zu den Gefahrenklassen im Sinne der Verordnung (EG) Nr. 1272/2008**
 - **akute Toxizität:** Aufgrund der verfügbaren Daten sind die Einstufungskriterien nicht erfüllt.
 - **Einstufungsrelevante LD/LC50-Werte:**
-
- 2768-02-7 Trimethoxyvinylsilan**
- Oral LD50 7.100 mg/kg (rat)
- Dermal LD50 3.200 mg/kg (rab)
- Inhalativ LC50/4 h 16,8 mg/l (rat)
- **Bei Hautkontakt:** Aufgrund der verfügbaren Daten sind die Einstufungskriterien nicht erfüllt.
 - **Bei Augenkontakt:** Aufgrund der verfügbaren Daten sind die Einstufungskriterien nicht erfüllt.
 - **Sensibilisierung der Atemwege/Haut**
dermal: nicht sensibilisierend
Quelle: Analogieschluss
Prüfbericht gem. OECD Guideline 406 (Guinea Pigs)

- **Reproduktionstoxizität** Aufgrund der verfügbaren Daten sind die Einstufungskriterien nicht erfüllt.
 - **Spezifische Zielorgan-Toxizität bei einmaliger Exposition**
Aufgrund der verfügbaren Daten sind die Einstufungskriterien nicht erfüllt.
 - **Spezifische Zielorgan-Toxizität bei wiederholter Exposition**
Aufgrund der verfügbaren Daten sind die Einstufungskriterien nicht erfüllt.
 - **Aspirationsgefahr** Aufgrund der verfügbaren Daten sind die Einstufungskriterien nicht erfüllt.
 - **Sonstige Angaben (zur experimentellen Toxikologie):**
Produkt hydrolysiert unter Bildung von Methanol (CAS-Nr. 67-56-1). Methanol ist giftig beim Einatmen, Verschlucken und Berührung mit der Haut. Methanol schädigt die Organe. Methanol ist leichtentzündlich. Beim Einatmen von Aerosolnebeln können Gesundheitsschäden auftreten.
 - **11.2 Angaben über sonstige Gefahren**
 - **Endokrinschädliche Eigenschaften**
-
- Keiner der Inhaltsstoffe ist enthalten.

ABSCHNITT 12: Umweltbezogene Angaben

- **12.5 Ergebnisse der PBT- und vPvB-Beurteilung**
- **PBT:** Nicht anwendbar.
- **vPvB:** Nicht anwendbar.
- **12.6 Endokrinschädliche Eigenschaften**
Dieses Produkt enthält keine Bestandteile, die gemäß REACH Artikel 57(f) oder der delegierten Verordnung (EU) 2017/2100 der Kommission oder der delegierten Verordnung (EU) 2018/605 der Kommission in Mengen von 0,1 % oder mehr endokrinschädliche Eigenschaften aufweisen.
- **12.7 Andere schädliche Wirkungen**
- **Weitere ökologische Hinweise:**
- **Allgemeine Hinweise:**
Nicht in das Grundwasser, in Gewässer oder in die Kanalisation gelangen lassen.
Wassergefährdungsklasse 1 : schwach wassergefährdend

ABSCHNITT 13: Hinweise zur Entsorgung

- **13.1 Verfahren der Abfallbehandlung**
- **Empfehlung:**
Örtliche behördliche Vorschriften beachten.
Material kann nach der Aushärtung zusammen mit dem Hausmüll oder den Gewerbeabfällen entsorgt werden.
Unverbrauchtes Material (flüssig, pastös) ist als Sonderabfall zu entsorgen.
- **Verpackungen:**
- **Empfehlung:**
Restentleerte Verpackungen können einer Wiederverwertung/Recycling zugeführt werden.
Nicht reinigungsfähige Verpackungen bzw. Verpackungen mit Restinhalten sind wie der Stoff zu entsorgen.

ABSCHNITT 14: Angaben zum Transport

- **14.1 UN-Nummer oder ID-Nummer**
- **ADR, ADN, IMDG, IATA** entfällt
- **14.2 Ordnungsgemäße UN-Versandbezeichnung**
- **ADR, ADN, IMDG, IATA** entfällt
- **14.3 Transportgefahrenklassen**
- **ADR, ADN, IMDG, IATA**
- **Klasse** entfällt
- **14.4 Verpackungsgruppe**
- **ADR, IMDG, IATA** entfällt

Konformitätserklärung für Produkte mit Muster-EPDs

Der Industrieverband Deutsche Bauchemie e.V., in dem Hermann Otto GmbH Mitglied ist, hat sogenannte Muster-Umweltproduktdeklarationen (Muster-EPD) entwickelt und durch das unabhängige Institut Bauen und Umwelt e.V. (IBU) verifizieren lassen.

Diese durch das IBU verifizierten Muster-EPDs wurden von der Deutschen Bauchemie und dem IBU veröffentlicht.

Anhand unserer Produktrezepturen wurde überprüft, ob unsere Produkte durch die Muster-EPD abgedeckt werden.

Mit dieser Erklärung bestätigen wir, dass das Produkt

OTTOCOLL® M 502

von der beigefügten Muster-EPD erfasst wird

Products based on polyurethane or silane-modified polymer, group 2
EPD-FEI-20220106-IBG1-EN

Das heißt, dass die Ökobilanzdaten und die sonstigen Inhalte der beigefügten Muster-EPD auf das oben genannte Produkt zutreffen und für die Bewertung der Nachhaltigkeit von Gebäuden, in denen das oben genannte Produkt verbaut wurde, herangezogen werden können.

Hermann Otto GmbH

Fridolfing, 25.05.2023

ENVIRONMENTAL PRODUCT DECLARATION

as per ISO 14025 and EN 15804+A2

1. General Information

DBC - Deutsche Bauchemie e.V.
EFCC - European Federation for Construction Chemicals
FEICA - Association of the European Adhesive and Sealant Industry
IVK - Industrieverband Klebstoffe e.V.

Programme holder

IBU – Institut Bauen und Umwelt e.V.
Hegelplatz 1
10117 Berlin
Germany

Declaration number

EPD-FEI-20220106-IBG1-EN

This declaration is based on the product category rules:

Reaction resin products, 07.2014
(PCR checked and approved by the SVR)

Issue date

01.06.2022

Valid to

31.05.2027

Products based on polyurethane or silane-modified polymer, group 2

Owner of the declaration

DBC, Mainzer Landstr. 55, D-60329 Frankfurt a.M.
EFCC, 172 Boulevard du Triomphe, B-1160 Brussels
FEICA, Rue Belliard 40, B-1040 Brussels
IVK, Völklingerstr. 4, D-40219 Düsseldorf

Declared product / declared unit

1 kg product based on polyurethane or silane-modified polymer; density 1.25 - 1.8 g/cm³

Scope:

This verified EPD entitles the holder to bear the symbol of the Institut Bauen und Umwelt e.V. It exclusively applies for products produced in Europe and for a period of five years from the date of issue. This EPD may be used by members of DBC, EFCC, FEICA and IVK and their members provided it has been proven that the respective product can be represented by this EPD. For this purpose a guideline is available at the secretariats of the four associations. The members of the associations are listed on the respective websites.

The owner of the declaration shall be liable for the underlying information and evidence; the IBU shall not be liable with respect to manufacturer information, life cycle assessment data and evidences.

The EPD was created according to the specifications of *EN 15804+A2*. In the following, the standard will be simplified as *EN 15804*.

Verification

The standard *EN 15804* serves as the core PCR
Independent verification of the declaration and data
according to *ISO 14025:2011*

☐ internally ☒ externally

2. Product

2.1 Product description/Product definition

This EPD comprises reactive products based on polyurethane (PU) or silane-modified polymer (SMP) with a volatile organic compound (VOC) content ≤ 1 % (VOC definition according to *Decopaint Directive*) and a castor oil/-derivatives content ≤ 10 %. The one- or two-component reactive PU products are manufactured using polyols and isocyanates. Reactive products based on SMP polymers are usually manufactured as a one-component system from polyols and alkoxy silane in a preliminary stage. The aqueous systems consist of (a) dispersion and are crosslinked by a dispersible isocyanate. The products

fulfil manifold, often specific, functions in the construction, furnishing and repair of buildings. The product displaying the highest environmental impacts was used as a representative product for calculating the Life Cycle Assessment results (worst-case approach).

For the placing on the market in the European Union/European Free Trade Association (EU/EFTA) with the exception of Switzerland) products falling under Regulation (EU) No 305/2011 (*CPR*) need a Declaration of Performance taking into consideration either the relevant harmonised European standard or

the European Technical Assessment and the CE marking. For the application and use of the products the respective national provisions apply.

2.2 Application

Products based on polyurethane or silane-modified polymer, group 2, are used for the following applications:

Module 1: Adhesives for parquet and floor coverings

Parquet adhesives in accordance with *EN ISO 17178* for wooden and parquet floors and flooring adhesives in accordance with *EN ISO 22636* for floor coverings

Module 2: Reactive products for protecting and repairing concrete structures

Products for increasing the durability of concrete and reinforced concrete structures as well as for new concrete and for maintenance and repair work (requirements 2.1), products for structural bonding of strengthening materials to an existing concrete structure (requirements 2.2) and products for concrete injection for filling cracks, voids and interstices in concrete (requirements 2.3)

Module 3: Liquid-applied roof waterproofing kits

Reactive products for waterproofing roof constructions which are applied on site

Module 4: Reactive products for liquid-applied bridge deck waterproofing kits

Products for liquid-applied waterproofing for use on concrete bridge decks

Module 5: Screed material, floor screeds and decorative floors

Products for screed/synthetic resin screed for use in floor constructions

Module 6: Reactive products as an adhesive for tiles

Tile adhesives for internal and external tile installations on walls, floors and ceilings

Module 7: Adhesives and sealants

Reactive products for use as:

- Structural and repair adhesives
- Surface and joint sealants

Applications in accordance with the manufacturer's technical documentation/declaration of performance

Module 8: Reactive products for watertight covering kits

Products for waterproofing floors and/or walls in wet rooms inside buildings

Module 9: Reactive products for liquid-applied waterproofing

Liquid applied products for waterproofing of buildings

Module 10: Reactive products for waterproofing and/or for pre-treating mineral substrates

Applications in accordance with the manufacturer's technical documentation

Module 11: Liquid-applied waterproofing membranes for use beneath ceramic tiling

Module 12: One-component foam (OCF)

One component foam in a can is a one-component,

self-expanding, ready to use polyurethane foam used for various construction applications. It consists of a low viscous semi-fluid in a can that leaves the can as a froth and immediately forms a polyurethane foam.

12.1 Window & External Door Sealing & Insulation:

Installing mechanically fixed external windows and doors with an OCF, as part of a system including sealants and tapes

12.2 Door Installation & Fixation:

Fixing interior doors with an OCF

12.3 General Gap Filling:

Filling of regularly and irregularly shaped spaces between at least two surfaces made of typical building materials with a one-component foam (OCF)

Module 13: Sealants for glazing

Two-component reactive sealants are to be used as the second barrier of the structural hermetic seal in insulating glass units.

Module 14: Bonded glazing sealants

One- and two-component reactive sealants are used for the bonding of insulating glass units in the window frame.

2.3 Technical Data

The density of the products is between 1,25 and 1,8 g/cm³, other relevant technical data can be found in the manufacturer's technical documentation.

Module 1: Reactive products as adhesive for parquet and floor coverings

The minimum requirements of *EN ISO 17178* and *EN ISO 22636* must be maintained.

Module 2: Reactive products for protecting and repairing concrete structures

2.1 The requirements on essential characteristics for all intended uses in accordance with *EN 1504-2*, Tables 1 and 5 must be maintained. These are:

- Permeability to CO₂ (*EN 1062-6*)
- Water vapour permeability (*EN ISO 7783-1/-2*)
- Capillary absorption and permeability to water (*EN 1062-3*)
- Adhesive strength by pull-off test (*EN 1542*)

2.2 Essential characteristics for all intended uses in accordance with *EN 1504-4*, Tables 3.1 and 3.2 (manufacturer's declaration of performance)

2.3 Requirements on essential characteristics for all intended uses in accordance with *EN 1504-5*, Table 3:

- Injectability (*EN 1771*)
- Viscosity (*EN ISO 3219*)

Further essential characteristics in accordance with the manufacturer's technical documentation / declaration of performance

Module 3: Liquid-applied roof waterproofing kits

The minimum requirements of *EAD 030350-00-0402* Liquid-applied roof waterproofing kits must be maintained. The essential characteristics are to be specified in accordance with the European Technical Assessment (ETA, specification no.).

Module 4: Reactive products for liquid-applied bridge deck waterproofing kits

The minimum requirements of *ETAG 033* Liquid-applied bridge deck waterproofing kits must be maintained. The essential characteristics are to be specified in accordance with the European Technical Assessment (ETA, specification no.).

Module 5: Screed material, floor screeds and decorative floors

The requirements on essential characteristics according to *EN 13813* 'Screed material and floor screeds – Screed materials – Properties and requirements' must be maintained. For synthetic resin screeds, these are:

- Bond strength (*EN 13892-8*)
- Reaction to fire (*EN 13501-1*)

Further essential characteristics in accordance with the manufacturer's technical documentation/declaration of performance

Module 6: Reactive products as an adhesive for tiles

The requirements on essential characteristics according to *EN12004*, must be maintained. These are:

- Tensile adhesion strength after dry storage (*EN 12004-2*)
- Tensile adhesion strength after water immersion (*EN 12004-2*)
- Tensile adhesion strength after heat ageing (*EN 12004-2*)
- Tensile adhesion strength after freeze/thaw cycles (*EN 12004-2*)
- Open time: Tensile strength (*EN 12004-2*)

Further essential characteristics in accordance with the manufacturer's technical documentation

Module 7: Adhesives and sealants

Performance characteristics in accordance with the manufacturer's technical documentation/declaration of performance

Module 8: Reactive products for watertight covering kits

The minimum requirements of *EAD 030352-00-0503* Liquid applied watertight covering kits for wet room floors and/or walls must be maintained. The essential characteristics are to be specified in accordance with the European Technical Assessment (ETA, specification no.).

Module 9: Reactive products for liquid-applied waterproofings

The minimum requirements of the test principles regarding the issuing of general building authority test certificates for liquid-applied products for waterproofing of buildings (*PG-FLK*) must be maintained. The characteristics for the proof of usability are to be specified in accordance with the test principles for granting general building authority test certificates for liquid applied polymer products for waterproofing buildings

Module 10: Reactive products for waterproofing and/or for pre-treating mineral substrates

Name	Value	Unit
Density acc. to <i>EN ISO 2811-1</i>	700 - 1800	kg/m ³
Shore hardness A acc. to <i>ISO 48-4</i>	>15	
Shore hardness D acc. to <i>ISO 48-4</i>	>5	
Viscosity acc. to <i>ISO 3219-2</i>	<100	Pas

Other performance characteristics in accordance with the manufacturer's technical documentation/declaration of performance

Module 11: Liquid-applied waterproofing membranes for use beneath ceramic tiling

The minimum requirements on essential characteristics according to *EN 14891* - Liquid applied water-impermeable products for use beneath ceramic tiling - Definitions, specifications and test methods- must be maintained. These are:

- Initial tensile adhesion strength
- Tensile adhesion strength after water contact
- Tensile adhesion strength after heat ageing
- Tensile adhesion strength after freeze-thaw cycles
- Waterproofing
- Crack bridging ability

Module 12: One-Component Foams

Physical data of the one-component foam must be indicated in accordance with the respective product standards; these can include, for example:

12.1 Window & External Door Sealing & Insulation
Tensile Strength *EN 17333-4*, Movement Capability *EN 17333-4*, Curing Pressure *EN 17333-2*, Thermal conductivity *EN 17333-5*, Sound Insulation *EN ISO 717-1*, Post expansion *EN 17333-2*

12.2 Door Installation & Fixation

Shear Strength *EN 17333-4*, Tensile Strength *EN 17333-4*, Compression Strength *EN 17333-4*, Curing pressure *EN 17333-2*

12.3 General Gap Filling

Sagging *EN 17333-3* Other performance characteristics in accordance with the manufacturer's technical documents / declaration of performance.

Module 13: Sealants for glazing

Reactive sealants must comply with *EN 1279-4* Performance characteristics in accordance with the manufacturer's technical documentation/declaration of performance

Module 14: Bonded glazing sealants

Reactive sealants must comply with *RAL-GZ 716* part 2 and *ift-Guideline VE-08/4*. Performance characteristics in accordance with the manufacturer's technical documentation/declaration of performance

2.4 Delivery status

Liquid or pasty in containers made of tinplate or plastic packed in separate or combi-containers for the required mixing ratio. Packages containing one kg of product in different types of containers. Sealants in plastic cartridges and foil packs. Typical container sizes contain 10 to 25 kg of material. For major works, vats containing approx. 200 kg or IBCs (intermediate bulk containers) containing 1 tonne or more are also used. The LCA is based on tinplate, plastic and wood packaging.

2.5 Base materials/Ancillary materials

Products based on polyurethane or silane-modified polymer with a VOC content ≤1 % and a castor oil/-

derivatives content $\leq 10\%$ usually comprise a reactive polymer and a crosslinking system. The polymer component contains polyether and/or polyester polyols. Crosslinking takes place after installation on site. In the case of two-component systems, this involves the use of pre-polymers and polymers based on typically methylene diphenyl diisocyanate (MDI), toluene diisocyanate (TDI), hexamethylene diisocyanate (HDI) or isophorone diisocyanate (IPDI). The resin mixing ratio is adjusted according to the stoichiometric requirements. Crosslinking starts directly after the components have been mixed. There are also one-component reactive polymer formulations based on PU or SMP which crosslink in the presence of moisture. They comprise prepolymers based on e.g. MDI, TDI, HDI, IPDI or those with alkoxy-silane groups in the case of SMP formulations. In formulations with aqueous dispersions, dispersible isocyanates are used for crosslinking. The formulations can contain auxiliary materials such as accelerators, catalysts, wetting agents, foam regulators and viscosity regulators for fine-tuning the product features. Typically, the products covered by this EPD contain the following ranges of base materials and auxiliaries:

Polyol component: up to approx. 50 %

Crosslinking component: up to approx. 95 %

SMP component: up to approx. 80 %

Plasticiser: ~ 0-25 %

Additives / Pigments: ~ 0-30 %

Water: ~ 0-60 %

VOC: ≤ 1 % according to the *Decopaint Directive* (mandatory)

Castor oil and derivatives: $\leq 10\%$ (mandatory)

These ranges are average values and the composition of products complying with the EPD can deviate from these concentration levels in individual cases. More detailed information is available in the respective manufacturer's documentation (e.g. product data sheets).

Note: For companies to declare their products within the scope of this EPD it is not sufficient to simply comply with the product composition shown above.

The application of this EPD is only possible for member companies of DBC, EFCC, FEICA, and IVK member associations and only for specific formulations with a total score below the declared maximum score for a product group according to the associated guidance document.

1. substances from the "Candidate List of Substances of Very High Concern for Authorisation" (SVHC)

If this product contains substances listed in the candidate list (latest version) exceeding 0.1 percentage by mass, the relevant information can be found in the safety data sheet of the relevant product covered by this model EPD.

2. CMR substances in categories 1A and 1B

If this product contains other carcinogenic, mutagenic, reprotoxic (CMR) substances in categories 1A or 1B which are not on the candidate list, exceeding 0.1 percentage by mass, the relevant information can be found in the safety data sheet of the relevant product covered by this model EPD.

3. Biocide products added to the construction product

If this construction product contains biocide products, the active substances, information on the concentration and/or concentration range, the product

type together with information on their hazardous properties are listed in the safety data sheet of the respective product.

2.6 Manufacture

The components of the formulation are usually mixed batch-wise and packaged for delivery.

2.7 Environment and health during manufacturing

As a general rule, no other environmental protection measures other than those specified by law are necessary.

2.8 Product processing/Installation

Products based on polyurethane or silane-modified polymer, are processed by trowelling/knife-coating or rolling, pouring, spraying or injection.

Precautions for safe handling and storage (e.g. air exchange, exhaust ventilation, personal protective measures, precautions required in the handling of isocyanates, conditions for safe storage) must be observed in accordance with the information on the safety data sheet.

2.9 Packaging

A detailed description of packaging is provided in section 2.4. Empty containers and clean foils can be recycled.

2.10 Condition of use

During the use phase, products based on polyurethane or silane-modified polymer are crosslinked and essentially comprise an inert three-dimensional network. They are long-lasting products which protect our buildings in the form of adhesives, coatings or sealants as well as make an essential contribution in retaining their function and long-term value.

2.11 Environment and health during use

Option 1: Products for applications outside indoor areas with permanent stays by people

During use, the reactive products lose their reactive properties and become inert. No risks are known for water, air and soil if the products are used as designated.

Option 2: Products for applications inside indoor areas with permanent stays by people

When used in indoor areas with permanent stays by people, evidence of the emission performance of construction products in contact with indoor air must be submitted according to national requirements (see chapter 7). No further influences by emissions on the environment and health are known.

2.12 Reference service life

Cured products based on polyurethane or silane-modified polymer fulfil manifold, often specific functions in the construction or refurbishment of building structures. They decisively improve the usability of building structures and significantly extend their original service lives. The anticipated reference service life depends on the specific installation situation and the exposure associated with the product. It can be influenced by weathering as well as mechanical or chemical loads.

2.13 Extraordinary effects

Fire

Even without any special fire safety features, cured products based on polyurethane or silane-modified polymer comply with at least the requirements of *EN 13501-1* standard for fire classes E and Efl. In terms of the volumes applied, they have only a marginal influence on the fire performance characteristics (e.g. smoke gas development) of the building structure in which they have been installed. As crosslinked polyurethane systems do not melt or drip, they do not contribute towards spreading fire.

Water

Cured reactive products based on polyurethane or silane-modified polymer are chemically inert and insoluble in water. They are often used to protect building structures from harmful water ingress or the effects of flooding.

Mechanical destruction

Mechanical destruction of cured reactive products based on polyurethane or silane-modified polymer does not lead to any decomposition products which are harmful to the environment or health.

2.14 Re-use phase

According to present knowledge, no environmentally harmful effects are generally anticipated in landfilling, for example, as a result of de-construction and recycling of building materials with adherent

crosslinked products. If the crosslinked products can be removed from construction products without large effort, thermal recovery is a practical recycling variant on account of their energy content. Minor adhesion is not taken into consideration during disposal. It does not interfere with the disposal/recycling of the remaining components/building materials.

2.15 Disposal

Residual material which cannot be used or recycled must be combined at a specified ratio and hardened. Hardened product residue is not special waste. Non-hardened product residue is hazardous waste. Empty, dried containers (free of drops and scraped clean) are directed to the recycling process. Residue must be directed to proper waste disposal taking into consideration the local guidelines. The following waste codes according to the European List of Waste (2000/532/EC) can apply:

Hardened product residue:

European Waste Catalogue (EWC) code 080112 (waste paint and varnish with the exception of that mentioned in 08 01 11)

EWC code 080410 (waste adhesives and sealants other than mentioned in 08 04 09)

2.16 Further information

More information is available on the manufacturer's product or safety data sheets and on the manufacturer's websites or on request. Valuable technical information is also available on the associations' websites.

3. LCA: Calculation rules

3.1 Declared Unit

This EPD refers to the declared unit of 1 kg of product based on polyurethane or silane-modified polymer, group 2; applied into the building with a density of 1.25 - 1.8 g/cm³ in accordance with the *IBU PCR* part B for reaction resin products.

The results of the Life Cycle Assessment provided in this declaration have been selected from the product with the highest environmental impact (worst-case scenario).

Depending on the application, a corresponding conversion factor such as the density to convert volumetric use to mass must be taken into consideration.

The Declaration type is according to *EN 15804*: Cradle to gate with options, modules C1–C3, and module D (A1–A3, C, D) and additional modules.

Declared unit

Name	Value	Unit
Declared unit	1	kg
Gross density	1.25 - 1.8	g/cm ³
Conversion factor to 1 kg	-	-

3.2 System boundary

Modules A1, A2 and A3 are taken into consideration in the LCA:

- A1 Production of preliminary products
- A2 Transport to the plant
- A3 Production incl. provision of energy, production of packaging as well as auxiliaries and consumables and waste treatment

- A4 Transport to site

- A5 Installation, product applied into the building during A5 phase operations and packaging disposal. This stage considers VOC emissions during the installation phase. The declared product does not contain substances in the formulation that directly emit (as) VOC, but VOCs are generated by a chemical reaction that are occurring during this phase. The end of life for the packaging material considered is described below:

-Incineration, for materials like plastic and wood.

-Landfill, for inert material like metals (where used).

-C1-C2-C3-D

The building deconstruction (demolition process) takes place in the C1 module which considers energy production and consumption in terms of diesel and all the emissions connected with the fuel-burning process to run the machines. After the demolition, the product is transported to the end-of-life processing (C2 module) where all the impacts related to the transport processes are considered. For precautionary principle and as a worst-case scenario, thermal treatment is the only end-of-life scenario considered. This is modelled by the incineration process (module C3) where the product ends its life cycle.

Module D accounts for potential benefits that are beyond the defined system boundaries. Credits are generated during the incineration of wastes and related electricity produced that are occurring in the A5 module.

3.3 Estimates and assumptions

For this EPD formulation and production data defined and collected by FEICA were considered. Production

waste was assumed to be disposed of by incineration without credits as a worst-case. An average of steel and plastic containers, and wooden pallets was considered in the LCA.

3.4 Cut-off criteria

All raw materials submitted for the formulations and production data were taken into consideration. The manufacture of machinery, plant and other infrastructure required for the production of the products under review was not taken into consideration in the LCA.

Transport of packaging materials is excluded.

3.5 Background data

Data from the *GaBi* database SP40 (2020) was used as background data.

3.6 Data quality

Representative products were applied for this EPD and the product in the group displaying the highest environmental impact was selected for calculating the

LCA results. The background data sets used are less than 4 years old.

Production data and packaging are based on details provided by the manufacturer. The formulation used for evaluation refers to a specific product.

The data quality of the background data is considered to be good.

3.7 Period under review

Representative formulations are valid for 2021.

3.8 Allocation

Mass allocation has been applied when primary data have been used and implemented into the LCA model.

3.9 Comparability

Basically, a comparison or an evaluation of EPD data is only possible if all the data sets to be compared were created according to *EN 15804* and the building context, respectively the product-specific characteristics of performance, are taken into account.

The *GaBi* database SP40 (2020) was used.

4. LCA: Scenarios and additional technical information

Characteristic product properties

Information on biogenic Carbon

The packaging material contains biogenic carbon content which is presented below.

Incineration	1	kg
--------------	---	----

Information on describing the biogenic Carbon

Content at factory gate

Name	Value	Unit
Biogenic Carbon Content in product	0	kg C
Biogenic Carbon Content in accompanying packaging	0.016	kg C

Transport to the building site (A4)

Name	Value	Unit
Transport distance	1000	km
Gross weight	34 - 40	t
Payload capacity	27	t

Assembly (A5)

Name	Value	Unit
Other resources for packaging material	0.1	kg
Material loss	0.01	kg

Material loss regards the amount of product not used during the application phase into the building. This amount is 1% of the product, impacts related to the production of this part are charged to the A5 module. This percentage is considered as waste to disposal and impacts of its end of life have been considered in the LCA model and declared in A5.

End of life (C1-C3)

Name	Value	Unit
Collected as mixed construction waste	1	kg

SQP	[-]	ND	ND	ND	ND	ND	ND	ND
Caption	PM = Potential incidence of disease due to PM emissions; IR = Potential Human exposure efficiency relative to U235; ETP-fw = Potential comparative Toxic Unit for ecosystems; HTP-c = Potential comparative Toxic Unit for humans (cancerogenic); HTP-nc = Potential comparative Toxic Unit for humans (not cancerogenic); SQP = Potential soil quality index							

Potential Human exposure efficiency relative to U235, Disclaimer 1 – This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure or radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, radon and (from) some construction materials is also not measured by this indicator.

ADP minerals & metals, ADP fossil, WDP, ETF-fw, HTP-c, HTP-nc, SQP, Disclaimer 2 – The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experience with the indicator.

Additional environmental impact indicators (suggested by *EN15804*, table 4) are not declared in the EPD. The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high and as there is limited experience with the indicator (see ILCD classification in *EN 15804*, table 5). For this reason, results based on these indicators are not considered suitable for a decision-making process and are thus not declared in the EPD.

6. LCA: Interpretation

The majority of impacts are associated with the production phase (A1-A3). The most significant contribution to the production phase impacts is the upstream production of raw materials as the main driver. Another substantial contributor in the production phase, in the category of Abiotic depletion potential for non-fossil resources (ADPminerals&metals), is the steel sheet used as a packaging material. Emissions associated with the manufacturing of products also have some influence on the Formation potential of tropospheric ozone (POCP) in the production phase. In all EPDs, CO₂ is the most important contributor to Global Warming Potential (GWP). For the Acidification Potential (AP), NO_x and SO₂ contribute the largest share. In some cases, HCl in water also impacts AP due to the use of TiO₂ as a pigment. The majority of life cycle energy consumption takes place during the production phase (A1-A3). Significant contributions to Primary Energy Demand – Non-renewable (PENRT) come from the energy resources used in the production of raw materials. The largest contributor to Primary Energy Demand – Renewable

(PERT) impacts comes from the consumption of renewable energy resources required for the generation and supply of electricity. It should be noted that Primary Energy Demand – Renewable (PERT) generally represents a small percentage of the production phase primary energy demand with the bulk of the demand coming from non-renewable energy resources.

Transportation to the construction site (A4) and the installation process (A5) make a low contribution to all impacts.

The installation phase influences mainly the Photochemical ozone formation indicator, due to the emission of VOC during the operations. These emissions are not directly related to the pre-products in the resins, but they are related to the reaction products between pre-products and air components (water and oxygen).

The end-of-life phases influence climate change indicators, due to the incineration processes occurring in the C3 module, the process used for modelling the thermal treatment process of the resin.

7. Requisite evidence

VOC

Special tests and evidence have not been carried out or provided within the framework of drawing up this Model EPD. Some member states require special documentation on VOC emissions into indoor air for specific areas of application. This documentation, as well as documentation for voluntary VOC labelling, has to be provided separately and is specific for product in question.

Evidence pertaining to VOC emissions shall show

- either an attestation of compliance with,
- or documentation of test data that are required in

any of the existing regulations or in any of the existing voluntary labelling programs for low-emitting products, as far as these

(1) include limits for the parameters TVOC, TSVOC, carcinogens, formaldehyde, acetaldehyde, LCI limits for individual substances (including but not limited to the European list of harmonized LCIs), and the R value;

(2) base their test methods on *EN 16516*;

(3) perform testing and apply the limits after 28 days of storage in a ventilated test chamber, under the conditions specified in *EN 16516*; some regulations

and programs also have limits after 3 days, on top of the 28 days limits;
(4) express the test results as air concentrations in the European Reference Room, as specified in EN 16516.

Examples of such regulations are the *Belgian Royal Decree C-2014/24239*, or the *German AgBB/ABG*. Examples of such voluntary labelling programs are *EMICODE*, *Blue Angel* or *Indoor Air Comfort*.

Relevant test results shall be produced either by an ISO 17025 accredited commercial test lab or by a qualified internal test lab of the manufacturer. Examples for the applied limits after 28 days of storage in a ventilated test chamber are:

- TVOC: 1000 µg/m³

- TSVOC: 100 µg/m³
- Each carcinogen: 1 µg/m³
- Formaldehyde: 100 µg/m³
- LCI: different per substance involved
- R value: 1 (meaning that, in total, 100 % of the combined LCI values must not be exceeded).

Informative Annexes (2 tables):

Table 1 shown below is an overview of the most relevant regulations and specifications as of October 2021, as regards requirements after 3 days of storage in a ventilated test chamber.

Table 2 provides an overview of the most relevant regulations and specifications as of October 2021, as regards requirements after 28 days of storage in a ventilated test chamber. Some details may be missing in the table due to lack of space. Values given represent maximum values/limits.

Declaration of conformity for products with Model EPDs

The Association of Deutsche Bauchemie e.V., of which Hermann Otto GmbH is a member, has developed so-called Model Environmental Product Declarations (Model EPDs) and had them independently verified by the Institut Bauen und Umwelt e.V. (IBU).

These IBU verified Model EPDs have been made publicly available by Deutsch Bauchemie and IBU.

Based on the product formulations it was checked if our products were covered by the Model EPDs.

This Declaration confirms that the product

OTTOCOLL® M 502

is covered by the attached Model EPD
ed on polyurethane or silane-modified polymer, group 2
EPD-FEI-20220106-IBG1-EN

This means that the Life Cycle Assessment data and the remaining content of the attached Model EPD apply to the above mentioned product and may thus be used for the evaluation of the sustainability of buildings where the product is applied.

Hermann Otto GmbH

FEICA, Rue Belliard 40, B-1040 Brussels
IVK, Völklingerstr. 4, D-40219 Düsseldorf

Declared product / declared unit

1 kg product based on polyurethane or silane-modified polymer; density 1.25 - 1.8 g/cm³

Scope:

This verified EPD entitles the holder to bear the symbol of the Institut Bauen und Umwelt e.V. It exclusively applies for products produced in Europe and for a period of five years from the date of issue. This EPD may be used by members of DBC, EFCC, FEICA and IVK and their members provided it has been proven that the respective product can be represented by this EPD. For this purpose a guideline is available at the secretariats of the four associations. The members of the associations are listed on the respective websites.

The owner of the declaration shall be liable for the underlying information and evidence; the IBU shall not be liable with respect to manufacturer information, life cycle assessment data and evidences.

The EPD was created according to the specifications of *EN 15804+A2*. In the following, the standard will be simplified as *EN 15804*.

Verification

The standard *EN 15804* serves as the core PCR
Independent verification of the declaration and data
according to *ISO 14025:2011*

2. Product

2.1 Product description/Product definition

This EPD comprises reactive products based on polyurethane (PU) or silane-modified polymer (SMP) with a volatile organic compound (VOC) content ≤ 1 % (VOC definition according to *Decopaint Directive*) and a castor oil/-derivatives content ≤ 10 %. The one- or two-component reactive PU products are manufactured using polyols and isocyanates. Reactive products based on SMP polymers are usually manufactured as a one-component system from polyols and alkoxy silane in a preliminary stage. The aqueous systems consist of (a) dispersion and are crosslinked by a dispersible isocyanate. The products

fulfil manifold, often specific, functions in the construction, furnishing and repair of buildings. The product displaying the highest environmental impacts was used as a representative product for calculating the Life Cycle Assessment results (worst-case approach).

For the placing on the market in the European Union/European Free Trade Association (EU/EFTA) with the exception of Switzerland) products falling under Regulation (EU) No 305/2011 (*CPR*) need a Declaration of Performance taking into consideration either the relevant harmonised European standard or

the European Technical Assessment and the CE marking. For the application and use of the products the respective national provisions apply.

2.2 Application

Products based on polyurethane or silane-modified polymer, group 2, are used for the following applications:

Module 1: Adhesives for parquet and floor coverings

Parquet adhesives in accordance with *EN ISO 17178* for wooden and parquet floors and flooring adhesives in accordance with *EN ISO 22636* for floor coverings

Module 2: Reactive products for protecting and repairing concrete structures

Products for increasing the durability of concrete and reinforced concrete structures as well as for new concrete and for maintenance and repair work (requirements 2.1), products for structural bonding of strengthening materials to an existing concrete structure (requirements 2.2) and products for concrete injection for filling cracks, voids and interstices in concrete (requirements 2.3)

Module 3: Liquid-applied roof waterproofing kits

Reactive products for waterproofing roof constructions which are applied on site

Module 4: Reactive products for liquid-applied bridge deck waterproofing kits

Products for liquid-applied waterproofing for use on concrete bridge decks

Module 5: Screed material, floor screeds and decorative floors

Products for screed/synthetic resin screed for use in floor constructions

Module 6: Reactive products as an adhesive for tiles

Tile adhesives for internal and external tile installations on walls, floors and ceilings

Module 7: Adhesives and sealants

Reactive products for use as:

- Structural and repair adhesives
- Surface and joint sealants

Applications in accordance with the manufacturer's technical documentation/declaration of performance

Module 8: Reactive products for watertight covering kits

Products for waterproofing floors and/or walls in wet rooms inside buildings

Module 9: Reactive products for liquid-applied waterproofing

Liquid applied products for waterproofing of buildings

Module 10: Reactive products for waterproofing and/or for pre-treating mineral substrates

Applications in accordance with the manufacturer's technical documentation

Module 11: Liquid-applied waterproofing membranes for use beneath ceramic tiling

Module 12: One-component foam (OCF)

One component foam in a can is a one-component,

self-expanding, ready to use polyurethane foam used for various construction applications. It consists of a low viscous semi-fluid in a can that leaves the can as a froth and immediately forms a polyurethane foam.

12.1 Window & External Door Sealing & Insulation:

Installing mechanically fixed external windows and doors with an OCF, as part of a system including sealants and tapes

12.2 Door Installation & Fixation:

Fixing interior doors with an OCF

12.3 General Gap Filling:

Filling of regularly and irregularly shaped spaces between at least two surfaces made of typical building materials with a one-component foam (OCF)

Module 13: Sealants for glazing

Two-component reactive sealants are to be used as the second barrier of the structural hermetic seal in insulating glass units.

Module 14: Bonded glazing sealants

One- and two-component reactive sealants are used for the bonding of insulating glass units in the window frame.

2.3 Technical Data

The density of the products is between 1,25 and 1,8 g/cm³, other relevant technical data can be found in the manufacturer's technical documentation.

Module 1: Reactive products as adhesive for parquet and floor coverings

The minimum requirements of *EN ISO 17178* and *EN ISO 22636* must be maintained.

Module 2: Reactive products for protecting and repairing concrete structures

2.1 The requirements on essential characteristics for all intended uses in accordance with *EN 1504-2*, Tables 1 and 5 must be maintained. These are:

- Permeability to CO₂ (*EN 1062-6*)
- Water vapour permeability (*EN ISO 7783-1/-2*)
- Capillary absorption and permeability to water (*EN 1062-3*)
- Adhesive strength by pull-off test (*EN 1542*)

2.2 Essential characteristics for all intended uses in accordance with *EN 1504-4*, Tables 3.1 and 3.2 (manufacturer's declaration of performance)

2.3 Requirements on essential characteristics for all intended uses in accordance with *EN 1504-5*, Table 3:

- Injectability (*EN 1771*)
- Viscosity (*EN ISO 3219*)

Further essential characteristics in accordance with the manufacturer's technical documentation / declaration of performance

Module 3: Liquid-applied roof waterproofing kits

The minimum requirements of *EAD 030350-00-0402* Liquid-applied roof waterproofing kits must be maintained. The essential characteristics are to be specified in accordance with the European Technical Assessment (ETA, specification no.).

Module 4: Reactive products for liquid-applied bridge deck waterproofing kits

The minimum requirements of *ETAG 033* Liquid-applied bridge deck waterproofing kits must be maintained. The essential characteristics are to be specified in accordance with the European Technical Assessment (ETA, specification no.).

Module 5: Screed material, floor screeds and decorative floors

The requirements on essential characteristics according to *EN 13813* 'Screed material and floor screeds – Screed materials – Properties and requirements' must be maintained. For synthetic resin screeds, these are:

- Bond strength (*EN 13892-8*)
- Reaction to fire (*EN 13501-1*)

Further essential characteristics in accordance with the manufacturer's technical documentation/declaration of performance

Module 6: Reactive products as an adhesive for tiles

The requirements on essential characteristics according to *EN 12004*, must be maintained. These are:

- Tensile adhesion strength after dry storage (*EN 12004-2*)
- Tensile adhesion strength after water immersion (*EN 12004-2*)
- Tensile adhesion strength after heat ageing (*EN 12004-2*)
- Tensile adhesion strength after freeze/thaw cycles (*EN 12004-2*)
- Open time: Tensile strength (*EN 12004-2*)

Further essential characteristics in accordance with the manufacturer's technical documentation

Module 7: Adhesives and sealants

Performance characteristics in accordance with the manufacturer's technical documentation/declaration of performance

Module 8: Reactive products for watertight covering kits

The minimum requirements of *EAD 030352-00-0503* Liquid applied watertight covering kits for wet room floors and/or walls must be maintained. The essential characteristics are to be specified in accordance with the European Technical Assessment (ETA, specification no.).

Module 9: Reactive products for liquid-applied waterproofings

The minimum requirements of the test principles regarding the issuing of general building authority test certificates for liquid-applied products for waterproofing of buildings (*PG-FLK*) must be maintained. The characteristics for the proof of usability are to be specified in accordance with the test principles for granting general building authority test certificates for liquid applied polymer products for waterproofing buildings

Module 10: Reactive products for waterproofing and/or for pre-treating mineral substrates

Name	Value	Unit
Density acc. to <i>EN ISO 2811-1</i>	700 - 1800	kg/m ³
Shore hardness A acc. to <i>ISO 48-4</i>	>15	
Shore hardness D acc. to <i>ISO 48-4</i>	>5	
Viscosity acc. to <i>ISO 3219-2</i>	<100	Pas

Other performance characteristics in accordance with the manufacturer's technical documentation/declaration of performance

Module 11: Liquid-applied waterproofing membranes for use beneath ceramic tiling

The minimum requirements on essential characteristics according to *EN 14891* - Liquid applied water-impermeable products for use beneath ceramic tiling - Definitions, specifications and test methods- must be maintained. These are:

- Initial tensile adhesion strength
- Tensile adhesion strength after water contact
- Tensile adhesion strength after heat ageing
- Tensile adhesion strength after freeze-thaw cycles
- Waterproofing
- Crack bridging ability

Module 12: One-Component Foams

Physical data of the one-component foam must be indicated in accordance with the respective product standards; these can include, for example:

12.1 Window & External Door Sealing & Insulation
Tensile Strength *EN 17333-4*, Movement Capability *EN 17333-4*, Curing Pressure *EN 17333-2*, Thermal conductivity *EN 17333-5*, Sound Insulation *EN ISO 717-1*, Post expansion *EN 17333-2*

12.2 Door Installation & Fixation

Shear Strength *EN 17333-4*, Tensile Strength *EN 17333-4*, Compression Strength *EN 17333-4*, Curing pressure *EN 17333-2*

12.3 General Gap Filling

Sagging *EN 17333-3* Other performance characteristics in accordance with the manufacturer's technical documents / declaration of performance.

Module 13: Sealants for glazing

Reactive sealants must comply with *EN 1279-4* Performance characteristics in accordance with the manufacturer's technical documentation/declaration of performance

Module 14: Bonded glazing sealants

Reactive sealants must comply with *RAL-GZ 716* part 2 and *ift-Guideline VE-08/4*. Performance characteristics in accordance with the manufacturer's technical documentation/declaration of performance

2.4 Delivery status

Liquid or pasty in containers made of tinplate or plastic packed in separate or combi-containers for the required mixing ratio. Packages containing one kg of product in different types of containers. Sealants in plastic cartridges and foil packs. Typical container sizes contain 10 to 25 kg of material. For major works, vats containing approx. 200 kg or IBCs (intermediate bulk containers) containing 1 tonne or more are also used. The LCA is based on tinplate, plastic and wood packaging.

2.5 Base materials/Ancillary materials

Products based on polyurethane or silane-modified polymer with a VOC content ≤1 % and a castor oil/-

derivatives content $\leq 10\%$ usually comprise a reactive polymer and a crosslinking system. The polymer component contains polyether and/or polyester polyols. Crosslinking takes place after installation on site. In the case of two-component systems, this involves the use of pre-polymers and polymers based on typically methylene diphenyl diisocyanate (MDI), toluene diisocyanate (TDI), hexamethylene diisocyanate (HDI) or isophorone diisocyanate (IPDI). The resin mixing ratio is adjusted according to the stoichiometric requirements. Crosslinking starts directly after the components have been mixed. There are also one-component reactive polymer formulations based on PU or SMP which crosslink in the presence of moisture. They comprise prepolymers based on e.g. MDI, TDI, HDI, IPDI or those with alkoxy-silane groups in the case of SMP formulations. In formulations with aqueous dispersions, dispersible isocyanates are used for crosslinking. The formulations can contain auxiliary materials such as accelerators, catalysts, wetting agents, foam regulators and viscosity regulators for fine-tuning the product features. Typically, the products covered by this EPD contain the following ranges of base materials and auxiliaries:

Polyol component: up to approx. 50 %

Crosslinking component: up to approx. 95 %

SMP component: up to approx. 80 %

Plasticiser: ~ 0-25 %

Additives / Pigments: ~ 0-30 %

Water: ~ 0-60 %

VOC: ≤ 1 % according to the *Decopaint Directive* (mandatory)

Castor oil and derivatives: $\leq 10\%$ (mandatory)

These ranges are average values and the composition of products complying with the EPD can deviate from these concentration levels in individual cases. More detailed information is available in the respective manufacturer's documentation (e.g. product data sheets).

Note: For companies to declare their products within the scope of this EPD it is not sufficient to simply comply with the product composition shown above.

The application of this EPD is only possible for member companies of DBC, EFCC, FEICA, and IVK member associations and only for specific formulations with a total score below the declared maximum score for a product group according to the associated guidance document.

1. substances from the "Candidate List of Substances of Very High Concern for Authorisation" (SVHC)

If this product contains substances listed in the candidate list (latest version) exceeding 0.1 percentage by mass, the relevant information can be found in the safety data sheet of the relevant product covered by this model EPD.

2. CMR substances in categories 1A and 1B

If this product contains other carcinogenic, mutagenic, reprotoxic (CMR) substances in categories 1A or 1B which are not on the candidate list, exceeding 0.1 percentage by mass, the relevant information can be found in the safety data sheet of the relevant product covered by this model EPD.

3. Biocide products added to the construction product

If this construction product contains biocide products, the active substances, information on the concentration and/or concentration range, the product

type together with information on their hazardous properties are listed in the safety data sheet of the respective product.

2.6 Manufacture

The components of the formulation are usually mixed batch-wise and packaged for delivery.

2.7 Environment and health during manufacturing

As a general rule, no other environmental protection measures other than those specified by law are necessary.

2.8 Product processing/Installation

Products based on polyurethane or silane-modified polymer, are processed by trowelling/knife-coating or rolling, pouring, spraying or injection.

Precautions for safe handling and storage (e.g. air exchange, exhaust ventilation, personal protective measures, precautions required in the handling of isocyanates, conditions for safe storage) must be observed in accordance with the information on the safety data sheet.

2.9 Packaging

A detailed description of packaging is provided in section 2.4. Empty containers and clean foils can be recycled.

2.10 Condition of use

During the use phase, products based on polyurethane or silane-modified polymer are crosslinked and essentially comprise an inert three-dimensional network. They are long-lasting products which protect our buildings in the form of adhesives, coatings or sealants as well as make an essential contribution in retaining their function and long-term value.

2.11 Environment and health during use

Option 1: Products for applications outside indoor areas with permanent stays by people

During use, the reactive products lose their reactive properties and become inert. No risks are known for water, air and soil if the products are used as designated.

Option 2: Products for applications inside indoor areas with permanent stays by people

When used in indoor areas with permanent stays by people, evidence of the emission performance of construction products in contact with indoor air must be submitted according to national requirements (see chapter 7). No further influences by emissions on the environment and health are known.

2.12 Reference service life

Cured products based on polyurethane or silane-modified polymer fulfil manifold, often specific functions in the construction or refurbishment of building structures. They decisively improve the usability of building structures and significantly extend their original service lives. The anticipated reference service life depends on the specific installation situation and the exposure associated with the product. It can be influenced by weathering as well as mechanical or chemical loads.

2.13 Extraordinary effects

Fire

Even without any special fire safety features, cured products based on polyurethane or silane-modified polymer comply with at least the requirements of *EN 13501-1* standard for fire classes E and Efl. In terms of the volumes applied, they have only a marginal influence on the fire performance characteristics (e.g. smoke gas development) of the building structure in which they have been installed. As crosslinked polyurethane systems do not melt or drip, they do not contribute towards spreading fire.

Water

Cured reactive products based on polyurethane or silane-modified polymer are chemically inert and insoluble in water. They are often used to protect building structures from harmful water ingress or the effects of flooding.

Mechanical destruction

Mechanical destruction of cured reactive products based on polyurethane or silane-modified polymer does not lead to any decomposition products which are harmful to the environment or health.

2.14 Re-use phase

According to present knowledge, no environmentally harmful effects are generally anticipated in landfilling, for example, as a result of de-construction and recycling of building materials with adherent

crosslinked products. If the crosslinked products can be removed from construction products without large effort, thermal recovery is a practical recycling variant on account of their energy content. Minor adhesion is not taken into consideration during disposal. It does not interfere with the disposal/recycling of the remaining components/building materials.

2.15 Disposal

Residual material which cannot be used or recycled must be combined at a specified ratio and hardened. Hardened product residue is not special waste. Non-hardened product residue is hazardous waste. Empty, dried containers (free of drops and scraped clean) are directed to the recycling process. Residue must be directed to proper waste disposal taking into consideration the local guidelines. The following waste codes according to the European List of Waste (*2000/532/EC*) can apply:

Hardened product residue:

European Waste Catalogue (EWC) code 080112 (waste paint and varnish with the exception of that mentioned in 08 01 11)

EWC code 080410 (waste adhesives and sealants other than mentioned in 08 04 09)

2.16 Further information

More information is available on the manufacturer's product or safety data sheets and on the manufacturer's websites or on request. Valuable technical information is also available on the associations' websites.

3. LCA: Calculation rules

3.1 Declared Unit

This EPD refers to the declared unit of 1 kg of product based on polyurethane or silane-modified polymer, group 2; applied into the building with a density of 1.25 - 1.8 g/cm³ in accordance with the *IBU PCR* part B for reaction resin products.

The results of the Life Cycle Assessment provided in this declaration have been selected from the product with the highest environmental impact (worst-case scenario).

Depending on the application, a corresponding conversion factor such as the density to convert volumetric use to mass must be taken into consideration.

The Declaration type is according to *EN 15804*: Cradle to gate with options, modules C1–C3, and module D (A1–A3, C, D) and additional modules.

Declared unit

Name	Value	Unit
Declared unit	1	kg
Gross density	1.25 - 1.8	g/cm ³
Conversion factor to 1 kg	-	-

3.2 System boundary

Modules A1, A2 and A3 are taken into consideration in the LCA:

- A1 Production of preliminary products
- A2 Transport to the plant
- A3 Production incl. provision of energy, production of packaging as well as auxiliaries and consumables and waste treatment

- A4 Transport to site

- A5 Installation, product applied into the building during A5 phase operations and packaging disposal. This stage considers VOC emissions during the installation phase. The declared product does not contain substances in the formulation that directly emit (as) VOC, but VOCs are generated by a chemical reaction that are occurring during this phase. The end of life for the packaging material considered is described below:

- Incineration, for materials like plastic and wood.

- Landfill, for inert material like metals (where used).

- C1-C2-C3-D

The building deconstruction (demolition process) takes place in the C1 module which considers energy production and consumption in terms of diesel and all the emissions connected with the fuel-burning process to run the machines. After the demolition, the product is transported to the end-of-life processing (C2 module) where all the impacts related to the transport processes are considered. For precautionary principle and as a worst-case scenario, thermal treatment is the only end-of-life scenario considered. This is modelled by the incineration process (module C3) where the product ends its life cycle.

Module D accounts for potential benefits that are beyond the defined system boundaries. Credits are generated during the incineration of wastes and related electricity produced that are occurring in the A5 module.

3.3 Estimates and assumptions

For this EPD formulation and production data defined and collected by FEICA were considered. Production

waste was assumed to be disposed of by incineration without credits as a worst-case. An average of steel and plastic containers, and wooden pallets was considered in the LCA.

3.4 Cut-off criteria

All raw materials submitted for the formulations and production data were taken into consideration. The manufacture of machinery, plant and other infrastructure required for the production of the products under review was not taken into consideration in the LCA.

Transport of packaging materials is excluded.

3.5 Background data

Data from the *GaBi* database SP40 (2020) was used as background data.

3.6 Data quality

Representative products were applied for this EPD and the product in the group displaying the highest environmental impact was selected for calculating the

LCA results. The background data sets used are less than 4 years old.

Production data and packaging are based on details provided by the manufacturer. The formulation used for evaluation refers to a specific product.

The data quality of the background data is considered to be good.

3.7 Period under review

Representative formulations are valid for 2021.

3.8 Allocation

Mass allocation has been applied when primary data have been used and implemented into the LCA model.

3.9 Comparability

Basically, a comparison or an evaluation of EPD data is only possible if all the data sets to be compared were created according to *EN 15804* and the building context, respectively the product-specific characteristics of performance, are taken into account.

The *GaBi* database SP40 (2020) was used.

4. LCA: Scenarios and additional technical information

Characteristic product properties

Information on biogenic Carbon

The packaging material contains biogenic carbon content which is presented below.

Incineration	1	kg
--------------	---	----

Information on describing the biogenic Carbon

Content at factory gate

Name	Value	Unit
Biogenic Carbon Content in product	0	kg C
Biogenic Carbon Content in accompanying packaging	0.016	kg C

Transport to the building site (A4)

Name	Value	Unit
Transport distance	1000	km
Gross weight	34 - 40	t
Payload capacity	27	t

Assembly (A5)

Name	Value	Unit
Other resources for packaging material	0.1	kg
Material loss	0.01	kg

Material loss regards the amount of product not used during the application phase into the building. This amount is 1% of the product, impacts related to the production of this part are charged to the A5 module. This percentage is considered as waste to disposal and impacts of its end of life have been considered in the LCA model and declared in A5.

End of life (C1-C3)

Name	Value	Unit
Collected as mixed construction waste	1	kg

SQP	[-]	ND	ND	ND	ND	ND	ND	ND
Caption	PM = Potential incidence of disease due to PM emissions; IR = Potential Human exposure efficiency relative to U235; ETP-fw = Potential comparative Toxic Unit for ecosystems; HTP-c = Potential comparative Toxic Unit for humans (cancerogenic); HTP-nc = Potential comparative Toxic Unit for humans (not cancerogenic); SQP = Potential soil quality index							

Potential Human exposure efficiency relative to U235, Disclaimer 1 – This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure or radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, radon and (from) some construction materials is also not measured by this indicator.

ADP minerals & metals, ADP fossil, WDP, ETF-fw, HTP-c, HTP-nc, SQP, Disclaimer 2 – The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experience with the indicator.

Additional environmental impact indicators (suggested by *EN15804*, table 4) are not declared in the EPD. The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high and as there is limited experience with the indicator (see ILCD classification in *EN 15804*, table 5). For this reason, results based on these indicators are not considered suitable for a decision-making process and are thus not declared in the EPD.

6. LCA: Interpretation

The majority of impacts are associated with the production phase (A1-A3). The most significant contribution to the production phase impacts is the upstream production of raw materials as the main driver. Another substantial contributor in the production phase, in the category of Abiotic depletion potential for non-fossil resources (ADPminerals&metals), is the steel sheet used as a packaging material. Emissions associated with the manufacturing of products also have some influence on the Formation potential of tropospheric ozone (POCP) in the production phase. In all EPDs, CO₂ is the most important contributor to Global Warming Potential (GWP). For the Acidification Potential (AP), NO_x and SO₂ contribute the largest share. In some cases, HCl in water also impacts AP due to the use of TiO₂ as a pigment. The majority of life cycle energy consumption takes place during the production phase (A1-A3). Significant contributions to Primary Energy Demand – Non-renewable (PENRT) come from the energy resources used in the production of raw materials. The largest contributor to Primary Energy Demand – Renewable

(PERT) impacts comes from the consumption of renewable energy resources required for the generation and supply of electricity. It should be noted that Primary Energy Demand – Renewable (PERT) generally represents a small percentage of the production phase primary energy demand with the bulk of the demand coming from non-renewable energy resources.

Transportation to the construction site (A4) and the installation process (A5) make a low contribution to all impacts.

The installation phase influences mainly the Photochemical ozone formation indicator, due to the emission of VOC during the operations. These emissions are not directly related to the pre-products in the resins, but they are related to the reaction products between pre-products and air components (water and oxygen).

The end-of-life phases influence climate change indicators, due to the incineration processes occurring in the C3 module, the process used for modelling the thermal treatment process of the resin.

7. Requisite evidence

VOC

Special tests and evidence have not been carried out or provided within the framework of drawing up this Model EPD. Some member states require special documentation on VOC emissions into indoor air for specific areas of application. This documentation, as well as documentation for voluntary VOC labelling, has to be provided separately and is specific for product in question.

Evidence pertaining to VOC emissions shall show

- either an attestation of compliance with,
- or documentation of test data that are required in

any of the existing regulations or in any of the existing voluntary labelling programs for low-emitting products, as far as these

(1) include limits for the parameters TVOC, TSVOC, carcinogens, formaldehyde, acetaldehyde, LCI limits for individual substances (including but not limited to the European list of harmonized LCIs), and the R value;

(2) base their test methods on *EN 16516*;

(3) perform testing and apply the limits after 28 days of storage in a ventilated test chamber, under the conditions specified in *EN 16516*; some regulations

and programs also have limits after 3 days, on top of the 28 days limits;
(4) express the test results as air concentrations in the European Reference Room, as specified in EN 16516.

Examples of such regulations are the *Belgian Royal Decree C-2014/24239*, or the *German AgBB/ABG*. Examples of such voluntary labelling programs are *EMICODE*, *Blue Angel* or *Indoor Air Comfort*.

Relevant test results shall be produced either by an ISO 17025 accredited commercial test lab or by a qualified internal test lab of the manufacturer. Examples for the applied limits after 28 days of storage in a ventilated test chamber are:

- TVOC: 1000 µg/m³

- TSVOC: 100 µg/m³
- Each carcinogen: 1 µg/m³
- Formaldehyde: 100 µg/m³
- LCI: different per substance involved
- R value: 1 (meaning that, in total, 100 % of the combined LCI values must not be exceeded).

Informative Annexes (2 tables):

Table 1 shown below is an overview of the most relevant regulations and specifications as of October 2021, as regards requirements after 3 days of storage in a ventilated test chamber.

Table 2 provides an overview of the most relevant regulations and specifications as of October 2021, as regards requirements after 28 days of storage in a ventilated test chamber. Some details may be missing in the table due to lack of space. Values given represent maximum values/limits.

OTTOCOLL® KLARKARL

Nachhaltigkeitsdatenblatt

Prüfungen/Zulassungen

- EMICODE® EC 1^{PLUS} – sehr emissionsarm

- Französische VOC-Emissionsklasse A+

- Umweltproduktdeklaration (EPD)

Deklarationsnummer: EPD-FEI-20220106-IBG1-EN

Gebäudezertifizierungssysteme

QNG - Qualitätssiegel Nachhaltiges Gebäude

Version 1.3

Kriterium	Schadstoffvermeidung in Baumaterialien
Übersichtstabelle	4. Kleb- und Dichtstoffe - Zeile 4.2
Bauproduktgruppe	Bauseitig verarbeitete Kleb- und Dichtstoffe auf Basis von PU-, PU-Hybrid- und SMP-Rezepturen (silanmodifizierte Polymere) in Innenräumen
Anforderungen	Produktdokumentation und Deklaration enthaltener SVHC >0,1 % und Chlorparaffine, TCEP, PBB und PBDE ≤0,1 % und lösemittelfrei oder GISCODE PU10, PU20, PU40 (ALT) bzw. PU50 (ALT)
Einstufung	Erfüllt die Anforderungen, da Deklaration enthaltener SVHC >0,1 % und Chlorparaffine, TCEP, PBB und PBDE ≤0,1 % und lösemittelfrei.

DGNB – Deutsche Gesellschaft für Nachhaltiges Bauen

Version 2023

Kriterium	ENV 1.2 Risiken für die lokale Umwelt	
Kriterienmatrix	Zeile 11	
Produkttyp	Dichtungsmassen, Dichtstoffe, Klebstoffe für punkt- und linienförmige Verklebungen von Bauteilen im Innenraum: <ul style="list-style-type: none">- mechanisch belastete Fugen- Sockelleisten- Türschienen- Stützenkleber (Doppel- oder Hohlboden)- Lüftungskanäle Gemeint sind Acrylklebstoffe/-kleber, Silikondichtstoffe, PU-Kleber und silanmodifizierte Polymere (SMP)	
Anforderungen	Qualitätsstufe 1 (niedrig)	GISCODE PU10, PU20, RS10, DA20, DSE20, DSA20, DSO20 oder DH20 und Bonuspunkte SVHC ≤0,1 %
	Qualitätsstufe 2	GISCODE PU10, PU20, RS10, DA20, DSE20, DSA20, DSO20 oder DH20 und Bonuspunkte SVHC ≤0,1 %
	Qualitätsstufe 3	GISCODE PU10, PU20, RS10, DA20, DSE20, DSA20, DSO20 oder DH20 und EMICODE® EC 1 ^{PLUS} und Bonuspunkte SVHC ≤0,1 %
	Qualitätsstufe 4 (hoch)	GISCODE PU10, PU20, RS10, DA20, DSE20, DSA20, DSO20 oder DH20 und EMICODE® EC 1 ^{PLUS} und Bonuspunkte SVHC ≤0,1 %
Einstufung	Erfüllt die Anforderungen an Qualitätsstufe 4, da GISCODE RS10 und EMICODE® EC 1^{PLUS} und SVHC ≤0,1 %.	

DGNB – Deutsche Gesellschaft für Nachhaltiges Bauen

Version 2018

Kriterium	ENV 1.2 Risiken für die lokale Umwelt	
Kriterienmatrix	Zeile 11	
Produkttyp	Dichtungsmassen, Dichtstoffe, Klebstoffe für punkt- und linienförmige Verklebungen von Bauteilen im Innenraum. Gemeint sind PU-Kleber und silanmodifizierte Polymere (SMP).	
Anforderungen	Qualitätsstufe 1 (niedrig)	GISCODE PU20 oder RS10
	Qualitätsstufe 2	GISCODE PU20 oder RS10
	Qualitätsstufe 3	GISCODE PU20 oder RS10 und EMICODE® EC 1 oder EC 1 ^{PLUS}
	Qualitätsstufe 4 (hoch)	GISCODE PU20 oder RS10 und EMICODE® EC 1 oder EC 1 ^{PLUS}
Einstufung	Erfüllt die Anforderungen an Qualitätsstufe 4, da GISCODE RS10 und EMICODE® EC 1^{PLUS}.	

DGNB – Deutsche Gesellschaft für Nachhaltiges Bauen

Version 2018

Kriterium	ENV 1.2 Risiken für die lokale Umwelt	
Kriterienmatrix	Zeile 12	
Produkttyp	Dichtungsmassen, Dichtstoffe, Klebstoffe für punkt- und linienförmige Verklebungen von Bauteilen im Innenraum und Lüftungskanälen im Gebäudeinneren. Gemeint sind Acrylatdichtstoffe/-kleber, Silikondichtstoffe und SMP-(Hybrid-Dichtstoffe).	
Anforderungen	Qualitätsstufe 1 (niedrig)	–
	Qualitätsstufe 2	Keine im SDB deklarierten Chlorparaffine
	Qualitätsstufe 3	Chlorparaffine <0,1 %
	Qualitätsstufe 4 (hoch)	Chlorparaffine <0,1 %, Lösemittel <1 % und KWS-Weichmacher <0,1 %
Einstufung	Erfüllt die Anforderungen an Qualitätsstufe 4, da Chlorparaffine <0,1 %, Lösemittel <1 % und KWS-Weichmacher <0,1 %.	

Kriterium	1.1.6 Risiken für die lokale Umwelt	
Übersichtstabelle	6. Kleb- und Dichtstoffe – Zeile 8	
Bauprodukttyp	Kleb- und Dichtstoffe aus PU, SMP (silanmodifizierte Polymere), Acrylat (einschließlich Dispersionsklebstoffe) oder Silikon für punkt- und linienförmige Verklebungen und Abdichtungen im Innenraum inkl. TGA.	
Anforderungen	Qualitätsniveau 1 (niedrig)	Dokumentation, Deklaration enthaltener SVHC >0,1 % und Deklaration biozider Wirkstoffe (sofern eingesetzt).
	Qualitätsniveau 2	Deklaration biozider Wirkstoffe (sofern eingesetzt) und Deklaration enthaltener SVHC >0,1 % und Chlorparaffine <0,1 %. Für PU-Klebstoffe gilt zusätzlich: GISCODE PU10 oder PU20 und TCEP <0,1 %.
	Qualitätsniveau 3	Deklaration biozider Wirkstoffe (sofern eingesetzt) und Deklaration enthaltener SVHC >0,1 % und Chlorparaffine <0,1 %. Für PU-Klebstoffe gilt zusätzlich: GISCODE PU10 oder PU20 und TCEP <0,1 %.
	Qualitätsniveau 4	Keine amin- oder oximvernetzenden Silikone. Zusätzlich gilt: RAL-UZ 123 oder EMICODE® EC 1/EC 1 ^{PLUS} und Chlorparaffine <0,1 % und Deklaration biozider Wirkstoffe (sofern eingesetzt) und Deklaration enthaltener SVHC >0,1 %. Für PU-Klebstoffe gilt zusätzlich: TCEP <0,1 %.
	Qualitätsniveau 5 (hoch)	Keine amin- oder oximvernetzenden Silikone. Zusätzlich gilt: RAL-UZ 123 oder EMICODE® EC 1/EC 1 ^{PLUS} und Chlorparaffine <0,1 % und Deklaration biozider Wirkstoffe (sofern eingesetzt) und Deklaration enthaltener SVHC >0,1 %. Für PU-Klebstoffe gilt zusätzlich: TCEP <0,1 %.
Einstufung	Erfüllt die Anforderungen an Qualitätsniveau 5, da kein amin- oder oximvernetzendes Silikon und EMICODE® EC1^{PLUS} und Deklaration der bioziden Wirkstoffe (sofern eingesetzt) und Deklaration enthaltener SVHC >0,1 % und Chlorparaffine <0,1 %.	
Dokumentationsunterlagen	Alle aufgeführten Dokumente stehen auf www.otto-chemie.de zum Download bereit	
	1. Technisches Datenblatt 2. Sicherheitsdatenblatt 3. Nachhaltigkeitsdatenblatt 4. Prüfzeugnisse 5. Umweltproduktdeklaration

Lizenzerteilung zur Führung des EMICODE

Lizenzierungs-Nummer: 8191/10.10.13
Für den Artikel OTTOCOLL® KLARKARL
der Firma Hermann Otto GmbH
wird auf Antrag vom 06.07.2017

unter Bezugnahme auf die Einstufung gemäß den nach § 10 der
GEV-Zeichensatzung festgelegten Richtlinien

namens der Gemeinschaft Emissionskontrollierte Verlegewerkstoffe, Klebstoffe
und Bauprodukte e.V. für den oben genannten Artikel nach § 5 Abs. 4 der GEV-
Zeichensatzung die Lizenz zur Führung des GEV-Zeichens

erteilt. Damit erfüllt dieser Artikel die rückseitig aufgeführten Kriterien.
Die Firma ist ordentliches Mitglied der GEV.

OM098 07.07.2022
gültig bis 07.07.2027

Der Geschäftsführer
Gemeinschaft Emissionskontrollierte Verlegewerkstoffe,
Klebstoffe und Bauprodukte e.V.
Völklinger Straße 4 · D-40219 Düsseldorf

Hinweise zu den Voraussetzungen über die Vergabe der Lizenz für den EMICODE

Das gemäß vorseitiger Lizenz eingestufte Produkt hat nach der Satzung und den Richtlinien des Technischen Beirats der GEV u.a. den folgenden Kriterien zu genügen:

- Das Produkt entspricht allen gesetzlichen Bestimmungen, insbesondere denen des Chemikalienrechtes und seiner Verordnungen.
- Das Produkt ist nach der Definition der TRGS 610 lösemittelfrei, sofern es sich nicht um ein Oberflächenprodukt handelt. Soweit es einer Produktgruppe nach GISCODE zuzuordnen ist, wird diese angegeben.
- Für das Produkt wird ein Sicherheitsdatenblatt nach lokalem Recht in der jeweils aktuellen Fassung erstellt.
- Krebserregende, erbgutverändernde oder fruchtschädigende Stoffe der Klassen 1A und 1B werden dem Produkt bei der Herstellung nicht zugesetzt.
- Die Prüfung des Produktes erfolgt nach der definierten „GEV-Prüfmethode“. Die VOC-Bestimmung wird dabei in einer Prüfkammer nach dem Tenax-Thermodesorptions-Verfahren mit nachgeschalteter GC/MS-Analyse durchgeführt.
- Die Einstufung in EMICODE-Klassen erfolgt entsprechend den nachstehenden Bezeichnungen und TVOC/TSVOC-Konzentrationsbereichen. Zur Produktkennzeichnung ist die zutreffende EMICODE-Klasse zu verwenden:

1) Verlegewerkstoffe, Klebstoffe und Bauprodukte

Parameter	EC 1 ^{PLUS}	EC 1	EC 2
	max. zulässige Konzentration [$\mu\text{g}/\text{m}^3$]		
TVOC nach 3 Tagen	≤ 750	≤ 1000	≤ 3000
TVOC nach 28 Tagen	≤ 60	≤ 100	≤ 300
TSVOC nach 28 Tagen	≤ 40	≤ 50	≤ 100
R-Wert basierend auf AgBB-NIK-Werten nach 28 Tagen	1	-	-
Summe der nicht bewertbaren VOC	≤ 40	-	-
Formaldehyd nach 3 Tagen	≤ 50	≤ 50	≤ 50
Acetaldehyd nach 3 Tagen	≤ 50	≤ 50	≤ 50
Summe von Form- und Acetaldehyd	$\leq 0,05 \text{ ppm}$	$\leq 0,05 \text{ ppm}$	$\leq 0,05 \text{ ppm}$
Summe von flüchtigen K1A/K1B Stoffen nach 3 Tagen	≤ 10	≤ 10	≤ 10
Jeder flüchtige K1A/K1B Stoff nach 28 Tagen	≤ 1	≤ 1	≤ 1

2) Oberflächenbehandlungsmittel für Parkett, mineralische Böden und elastische Bodenbeläge

Parameter	EC 1 ^{PLUS}	EC 1	EC 2
	max. zulässige Konzentration [$\mu\text{g}/\text{m}^3$]		
Summe TVOC + TSVOC nach 28 Tagen	≤ 100 davon max. 40 SVOC	≤ 150 davon max. 50 SVOC	≤ 450 davon max. 100 SVOC
Formaldehyd nach 3 Tagen	≤ 50	≤ 50	≤ 50
Acetaldehyd nach 3 Tagen	≤ 50	≤ 50	≤ 50
Jeder flüchtige K1A/K1B Stoff nach 3 Tagen	≤ 10	≤ 10	≤ 10
Jeder flüchtige K1A/K1B Stoff nach 28 Tagen	≤ 1	≤ 1	≤ 1
